In the past 25 years planetary science has undergone a revolution with the discovery of vast oceans of liquid water within the icy moons of our Solar System. These subsurface oceans are concealed beneath thick ice layers. We refer to these moons and similar ocean bearing planetary objects as ocean worlds. In this 2nd edition we delve into and compare the latest scientific discoveries on 22 confirmed or potential ocean worlds ranging from the giant asteroid Ceres and the icy moons Europa and Enceladus to the distant dwarf planets of the outer Solar System such as Pluto, Sedna and Eris. Along the way we explore the contributions of multiple spacecraft such as the Pioneers, the Voyagers, Galileo, Cassini, Huygens and many others which have provided much of our current knowledge about these worlds as well as the latest scientific research on this subject. This book also explores the potential for life on each of the confirmed ocean worlds, evaluating their habitability. Ultimately these might hold the key to answering fundamental questions about life: How did life begin? Is there life beyond Earth? Where do we come from? With contributions from leading planetary scientists at NASA, ESA and other institutions, this book aims to be the definitive reference for anyone interested in this captivating subject.

This collection offers a contemporary analysis of film and television designed for this important audience with particular attention to new directions evident in the late twentieth and early twenty first centuries. With examples drawn from Iran, China, Korea, India, Israel, Eastern Europe, the Philippines and France as well as from the United States and the United Kingdom, contributors address a variety of issues ranging from content to production, distribution, marketing and the use of film both as object and medium in education. Through a diverse consideration of media for young infants up to young adults, this volume reveals the newest trends in children's film and television and its role as both a source

*The Cassini-Huygens Visit to Saturn* Michael Meltzer,2015-01-02 Cassini Huygens was the most ambitious and successful space journey ever launched to the outer Solar System This book examines all aspects of the journey its conception and planning the lengthy political processes needed to make it a reality the engineering and development required to build the spacecraft its 2 2 billion mile journey from Earth to the Ringed Planet and the amazing discoveries from the mission The author traces how the visions of a few brilliant scientists matured gained popularity and eventually became a reality Innovative technical leaps were necessary to assemble such a multifaceted spacecraft and reliably operate it while it orbited a planet so far from our own The Cassini Huygens spacecraft design evolved from other deep space efforts most notably the Galileo mission to Jupiter enabling the voluminous paradigm shifting scientific data collected by the spacecraft Some of these discoveries are absolute gems A small satellite that scientists once thought of as a dead piece of rock turned out to contain a warm underground sea that could conceivably harbor life And we now know that hiding under the mist of Saturn s largest moon Titan is a world with lakes fluvial channels and dunes hauntingly reminiscent of those on our own planet except that on Titan it s not water that fills those lakes but hydrocarbons These and other breakthroughs illustrate why the Cassini Huygens mission will be remembered as one of greatest voyages of discovery ever made

**Gold: How it Shaped History** Alan Ereira,2024-11-30 Gold is not what we think It is usually discussed in the context of wealth and art but this book has a broader subject so fundamental that it has been largely unremarked Informed by a mass of recent discoveries and a South American indigenous perspective it offers a new way of understanding the history of civilization Gold has been coinage treasure and adornment But it has been much more as the hidden driver of

wars and revolutions the rise and fall of empires and the transformation of societies As the sun traveled east to west across the sky gold incorruptible and corrupting flowed west to east hand to hand across the world That flow has brought empires to grow and collapse and driven plunder conquest and colonization It brought about wars and revolutions empowered new forms of arts and science and created the capitalist consumer economy that dominates us now All the gold people ever shaped still exists shining as new it can be mislaid but never decays Right from its first appearance on the west shore of the Black Sea long before the rise of Egypt and Mesopotamia gold crowned the first proto king Ever since it has been regarded as value incarnate with transcendental power The quantity we take has been increasing steadily for 6 500 years Now extraction accelerates Our gold mountain has doubled in the last fifty years Yet its price increases faster While the quantity doubled its buying power multiplied by six What does gold do that makes us want it so much As Alan Ereira reveals in this skilfully woven narrative gold is the hidden actor that shapes our story [High-Throughput Field Phenotyping to Advance Precision Agriculture and Enhance Genetic Gain](#) Urs Schmidhalter,Kelly R.
