Learn about Short Selling with iMinds Money's insightful fast knowledge series. Short selling is the practice of selling borrowed stock at a high price and then buying back the stock at a lower price. A short seller expects to profit from the fall in a stock's price. The more common investment practice is to go long, that is to buy stock with the expectation of the price rising in the future. Simply a short transaction sells high and buys low while a long transaction buys low and sells high. A basic example is as follows: An investor believes that Company A stock is overpriced at 60 per share.
