INSPECTION SERVICE POINTS FOR A BLOWN FUSE

CAUTION

A diagnostic code may be stored due to a blown fuse.

Remove the blown fuse and measure the resistance between the load side of the blown fuse and the earth. Close the switches of all circuits which are connected to this fuse. If the resistance is almost 0Ω at the time, there is a short somewhere between these switches and the load. If the resistance is not 0Ω, there is no short at the present time, but a momentary short has probably caused the fuse to blow. The main causes of a short circuit are the following:

- Wires being damaged for the vehicle body
- Damage to the outer casing of the harness due to wear or heat
- Water getting into the connector or circuitry
- Human error (prematurely starting a circuit, etc.)

HOW TO COPE WITH INTERMITTENT MALFUNCTIONS

Intermittent malfunctions often occur under certain conditions, and if these conditions can be ascertained, determining the cause becomes simple. In order to ascertain the conditions under which an intermittent malfunction occurs, first ask the customer for details about the driving conditions, weather conditions, frequency of occurrence and trouble symptoms, and then try to recreate the trouble symptoms. Next, identify whether the reason why the trouble symptom occurred under these conditions is due to vibration, temperature or some other factor. If vibration is thought to be the cause, carry out the following checks with the connectors and components to confirm whether the trouble symptom occurs. The checks to be checked are connections and components which are indicated by inspection procedures or given as probable causes (which generate diagnostic codes in trouble symptoms).
