these themes are brought together using Sen's Capability approach to highlight the fact that water policy is not a technocratic exercise but a matter of justice and entitlements. Water managers, academicians and civil society groups will benefit from reflecting on the important issues raised by Dr Anand in this book. Paul Appasamy, Madras School of Economics. Anand's book discusses in detail the economics of water and how societies deal with this scarce resource. The complexities of water as highlighted in his book have previously been little explored in any standard economic development textbook. Anand presents a fascinating framework on water and well-being by linking water and the capability approach. It is a must-read for all those dealing with water issues in particular and development issues in general. Naren Prasad, United Nations Research Institute for Social Development, UNRISD, Switzerland. This is a very thorough analysis of water's critical role as both a basic human need and an economic good. It is unlikely to be surpassed for so long. World Development Indicators, 1983.

Population Control Steven Mosher, 2017-07-05. For over half a century, policymakers committed to population control have perpetrated a gigantic, costly and inhumane fraud upon the human race. They have robbed people of the developing countries of their progeny and the people of the developed world of their pocketbooks. Determined to stop population growth at all costs, those Mosher calls population controllers have abused women, targeted racial and religious minorities, undermined primary health care programs and encouraged dictatorial actions, if not dictatorship. They have skewed the foreign aid programs of the United States and other developed countries in an anti-natal direction, corrupted dozens of well-intentioned nongovernmental organizations and impoverished authentic development programs. Blinded by zealotry, they have even embraced the most brutal birth control campaign in history, China's infamous one-child policy with all its attendant horrors. There is no workable demographic definition of overpopulation. Those who argue for its premises conjure up images of poverty, low incomes, poor health, unemployment, malnutrition, overcrowded housing to justify anti-natal programs. The irony is that such policies have in many ways caused what they predicted: a world which is poorer, materially less diverse, culturally less advanced economically and plagued by disease. The population controllers have not only studiously ignored mounting evidence of their multiple failures, they have avoided the biggest story of them all: Fertility rates are in free fall around the globe. Movements with billions of dollars at their disposal, not to mention thousands of paid advocates, do not go quietly to their graves. Moreover, many in the movement are not content to merely achieve zero population growth; they want to see negative population numbers. In their view, our current population should be reduced to one or two billion or so. Such a goal would keep these interest groups fully employed. It would also have dangerous consequences for a global environment.

Global Health Justice and Governance Jennifer Prah Ruger, 2018. today and offers a new theory of justice and governance as a way to resolve these seemingly intractable issues A fundamental responsibility of society is to ensure human flourishing The central role that health plays in flourishing places a unique claim on our public institutions and resources to ensure central health capabilities to reduce premature death and avoid preventable morbidities Faced with staggering inequalities imperiling epidemics and inadequate systems the world desperately needs a new global health architecture Global Health Justice and Governance lays out this vision

Environmental Problems in an Urbanizing World Jorge E. Hardoy, Diana Mitlin, David Satterthwaite, 2013-11-05 New edition of Environmental Problems in Third World Cities Cities in Africa Asia and Latin America contain some of the world's most life and health threatening human environments Environment related diseases and injuries cause millions of preventable deaths each year In many squatter settlements children are 40 to 50 times more likely to die before the age of five than they would be in Europe or North America and most such deaths are environment related Many cities also cause serious environmental degradation to their surroundings and increasingly contribute to global warming This updated and much expanded edition of the classic Environmental Problems in Third World Cities describes environmental problems and their effect on human health local ecosystems and global cycles It points to the political causes that underpin many of these problems including ineffective unaccountable governments and aid agencies reluctance to work with the urban poor It also highlights innovative solutions such as High quality low cost homes and neighbourhoods developed by urban poor groups working with local non governmental organizations Local Agenda 21s developed by municipal governments in partnership with community organizations In their analysis the authors show that cities can meet sustainable development goals There are practical affordable solutions to their environmental problems but most of these depend on more competent and accountable city governments and on more support for low income households and their organizations The book also outlines the changes needed international aid agencies to support this PRAISE FOR THE FIRST EDITION It's rare to encounter a work as authoritative and accessible as this It is a mine of useful information from cities in every corner of the Third World which does not shy away from the immensity of the problems but says as much about the solutions to them as about the problems themselves Jonathon Porritt Well written and very accessible The Geographical Journal Of value to students teachers practitioners policy makers and aid agencies Third World Planning Review A valuable resource for understanding the underlying problems this book offers practical alternatives Cities International The China Miracle Justin Yifu Lin, Fang Cai, Zhou Li, 2004-03-15 The tremendous success of China's economic reform in contrast with the vast difficulties encountered by the former Soviet Union and Eastern European countries in their transition has attracted worldwide attention Using a historical comparative and analytic approach grounded in mainstream economics the authors develop a consistent and rational framework of state owned enterprises and individual agents to analyze the internal logic of the traditional planning system They also explain why the Chinese economy grew slowly before the market oriented reform in

1979 but became one of the fastest growing economies afterwards and why the vigour chaos cycle became part of China's reform process. The book also addresses the questions that whether China can continue its trend of reform and development and become the largest economy in the world in the early 21st century and what the general implications of China's experience of development and reform are for other developing and transition economies. The first edition has been well received and is the standard textbook or reference for students and researchers of China studies. In this thoroughly revised edition the authors have updated the data and information in the book and include a new chapter on the impact of China's WTO accession on its economic reforms and causes of the current deflation.

The Right to Know Sandra Coliver, 1995. This book documents the massive deprivation of human rights resulting from governmental censorship, manipulation and control of reproductive health and sexuality information. The introductory chapter applies a human rights perspective to reproductive health to show that women must have full and impartial information to be able to choose services which further their goals rather than governmental policies. Examples of different types of state manipulation are provided and demographic, biomedical and reproductive health paradigms of contraceptive delivery programs are described. Chapter 2 identifies the binding obligations imposed on governments by the international principle that women have a right to appropriate reproductive health information. The third chapter provides a global overview of such topics as health expenditures, fertility rates, infertility, literacy and education, infant and child mortality, maternal mortality, child spacing, contraceptive usage, unmet need, abortion, HIV/AIDS and sexually transmitted diseases (STDs). Chapters 4-13 present country reports for Algeria, Brazil, Chile, Ireland, Kenya, Malawi, Pakistan, the Philippines, Poland and the US. The country reports reveal the overwhelming need of women to have access to this information and the innumerable ways in which governments control such access. The country reports also describe factors such as religion, culture, tradition, state of development and influence of foreign donors which have an impact on access to information. Each country report ends with specific recommendations and the concluding chapter defines seven obligations of national governments imposed by the right to information contained in international law and contains recommendations of ways nongovernmental organizations can use these obligations to lobby governments for improvements.

Welfare Capitalism in Southeast Asia M. Ramesh, Mukul G. Asher, 2000-02-11. This is the only in-depth study of social policies in Southeast Asia. It compares social security, health and education policies in Indonesia, Malaysia, the Philippines, Singapore and Thailand. After describing the policies and assessing their adequacy and equity implications, it examines the forces that have shaped them. It concludes that social programs except for primary education in the region are both inadequate and inequitable. It argues that the reason for this is political rather than cultural or socio-economic.
