Charring Rates of Laminated Veneer Lumber (LVL) from Tropical Hardwood Timber Zulhazmee Bakri,Zakiah Ahmad,2025-08-03 This book highlights the charring rate performance of LVL made from tropical hardwood according to EN 13381 7 and BS 476 standards Laminated Veneer Lumber LVL is produced by bonding layers of wood veneers using adhesives heat and pressure resulting in products that are typically stronger more dimensionally stable and more resistant to environmental factors than solid timber This makes LVL highly versatile for use in structural components of buildings However there remains limited knowledge about how LVL particularly those made from tropical hardwood performs under fire exposure Understanding the charring process where the outer wood layers degrade and form a protective char layer insulating the core helps engineers estimate the load bearing capacity of LVL during a fire Experimental studies and predictive models are discussed to provide insights into charring behavior under different conditions The findings contribute to enhancing fire safety design in timber construction ensuring compliance with international standards and improving the resilience of timber buildings during fire scenarios

Assessment of Total Evacuation Systems for Tall Buildings Enrico Ronchi,Daniel Nilsson,2014-05-27 This SpringerBrief focuses on the use of egress models to assess the optimal strategy for total evacuation in high rise buildings It investigates occupant relocation and evacuation strategies involving the exit stairs elevators sky bridges and combinations thereof Chapters review existing information on this topic and describe case study simulations of a multi component exit strategy This review provides the architectural design regulatory and research communities with a thorough understanding of the current and emerging evacuation procedures and possible future options A model case study

simulates seven possible strategies for the total evacuation of two identical twin towers linked with two sky bridges at different heights. The authors present the layout of the building and the available egress components including both vertical and horizontal egress components namely stairs, occupant evacuation elevators, OEEs, service elevators, transfer floors and sky bridges. The evacuation strategies employ a continuous spatial representation evacuation model Pathfinder and are cross validated by a fine network model STEPS Assessment of Total Evacuation Systems for Tall Buildings is intended for practitioners as a tool for analyzing evacuation methods and efficient exit strategies. Researchers working in architecture and fire safety will also find the book valuable.
