Place Randomized Trials Robert F. Boruch, 2005-05 The phrase evidence based policy is frequently used but it is crucial that such claims are scrutinized and validated When the data on social and behavioral interventions are presented high quality evidence must be clearly defined and the methodology behind such studies held to rigorous standards Both the Cochrane Collaboration focusing on healthcare and the international Campbell Collaboration concentrating on criminal justice education and social services were created to develop maintain and improve detailed guidelines for producing high quality systematic reviews And both organizations emphasize randomized controlled trials to evaluate the effectiveness of various interventions As a springboard from the Campbell Collaboration initiative and supported by the Rockefeller Foundation this special issue of The Annals includes a thorough review of randomized tests across a variety of studies Exploring significant dimensions of place randomized trials also called cluster randomized trials or group randomized trials these papers shed light on recent efforts to enhance the quality of designing such trials as well as on results reporting The research topics included in this volume are diverse Taken together these papers offer important insight into the nuts and bolts of conducting randomized trials the significance of place in trials how such studies are initiated the incentives and justifications needed by participants how to overcome challenges of implementation and where to find out what studies have already been conducted or are currently underway While providing far reaching insight into the topic of randomized testing these papers also identify new issues and key questions to be further addressed in future research Scholars and policymakers alike will find this collection of rigorous research essential in understanding the implications of current evidence based policies as well as a guidepost for designing and conducting new studies

Research Methods in Human Resource

Management Eugene F. Stone-Romero, Patrick J. Rosopa, 2020-05-01. Empirical research in HRM has focused on such issues as recruiting, testing, selection, training, motivation, compensation, and employee well-being. A review of the literature on these and other topics suggests that less than optimal methods have often been used in many HRM studies. Among the methods related problems are: using measures or manipulations that have little or no construct validity; b) samples of units; c) participants/organizations that bear little or no correspondence to target populations; d) research designs that have little or no potential for supporting valid causal inferences; e) samples that are too small to provide for adequate statistical power; and f) data analytic strategies that are inappropriate for the issues addressed by a study. As a result, our understanding of various HRM phenomena has suffered, and improved methods may serve to enhance both the science and practice of HRM. In view of the above, the purpose of this volume of Research in Human Resource Management is to provide basic and applied researchers with resources that will enable them to improve the internal validity, external validity, construct validity, and statistical conclusion validity of research in HRM and the related fields of industrial and organizational psychology and organizational behavior. Sound research in these fields should serve to improve both science and practice. With respect to science, support for a theory hinges on the validity of research used to support it. In addition, the results of valid research are essential for the development and implementation of HRM policies and practices. In the interest of promoting valid research-based inferences in HRM research, the chapters in this volume identify a wide range of methods related problems and offer recommendations for dealing with them. Chapters in it address such HRM research related topics as neglected research issues, causal inferences in research, heteroscedasticity in research, range restriction in research, interrater agreement indices, and construct validity issues in measures of such constructs as job performance, organizational politics, and safety climate.

Evaluation Roots Marvin C. Alkin, 2004-02-19 Concern for evaluation theoretical prescriptions emerged about 40 years ago giving it a history that is both recent enough to be part of the living experience of many of today's theorists and old enough to afford an opportunity for an analysis of how the field has evolved over time This book examines current evaluation theories and traces their evolution with the point of view that theories build upon theories and therefore evaluation theories are related to each other Initially all evaluation was derived from social science research methodology and accountability concerns The way in which these evaluation roots grew to form a tree helps to provide a better understanding of evaluation theory Thus the book uses an evaluation theory tree as its central metaphor The authors posit that evaluation theories can be classified by the extent to which they focus on methods uses or valuing these three approaches form the major limbs of the tree In addition to the authors overview which analyzes the evaluation theory tree and connections among theories the book contains essays by most of the leading evaluation theorists In these pieces the evaluators comment on their own development and give their views of their placement upon the tree
