The issue which the new ideas of these new books really raise with our culture is not about whether they are true since these new ideas identify a valid context for physical description and whereas the current context for math and physics 2014 cannot do that ie they cannot describe the stable properties of a general many but few body system Whereas the new ideas about math and physics can be used to solve the most fundamental problems about the physical world in regard to understanding physical stability a problem which the

current descriptive context of math and physics 2014 cannot solve That is what now in 2014 passes for math and physics knowledge are delusions Yet these delusions are the ideas expressed in our propaganda education system about math and physics Rather The real issue which these new ideas present to our culture is about our cultural relation to what is beyond the material world That is it is about our cultural representation of religion or the spirit In particular in relation to the previous knowledge humans needed to possess in order to make Gobekli tepe Puma Punku Stonehenge etc ie simply to be able to lift and position such large stones as well as the understanding which is needed to go beyond the context of the material world and into the context of all the ancient mythologies in regard to the ancient religious stories etc etc The current paradigm in 2014 describes a general state of indefi nable randomness in which there is always a chaotic transitioning process which exists as random elementary particle collisions and which supposedly is perpetually occurring Thus their description of the wide range of the generally stable states of the many but few body systems into which this forever chaotically transitioning process supposedly settles but explicit descriptions of this process do not exist Instead their answer is that such stable many but few body systems are too complicated to describe *The Reference Catalogue of Current Literature* ,1884 *Reference Catalogue of Current Literature* ,1913 **New Trends in Optical Network Design and Modeling** Alexandros A. Stavdas,2013-03-09 Optical network design and modeling is an essential issue for planning and operating networks for the next century The main issues in optical networking are being widely investigated not only for WDM networks but also for optical TDM and optical packet switching This book contributes to further progress in optical network architectures design operation and management and covers the following topics in detail Optical switching and Teabit networking Future OTDM and packet switched networks WDM ring networks Optical interworking and packets over wavelength Hybrid and switchless networks Medium access protocols for optical LANs and MANs This book contains the selected proceedings of the Fourth International Working Conference on Optical Network Design and Modeling which was sponsored by the International Federation for Information Processing IFIP and held in February 2000 in Athens Greece This valuable new book will be essential reading for academic researchers and practitioners working in computer science electrical engineering and communications **Machine Design** J.
