The Geography of Risk Gilbert M. Gaul,2025-09-23 This century has seen the costliest hurricanes in U S history but who bears the brunt of these monster storms Consider this Five of the most expensive hurricanes in history have made landfall since 2005 Katrina 160 billion Ike 40 billion Sandy 72 billion Harvey 125 billion and Maria 90 billion With more property than ever

in harm's way and the planet and oceans warming dangerously it won't be long before we see a 250 billion hurricane. Why? Because Americans have built 3 trillion worth of property in some of the riskiest places on earth: barrier islands and coastal floodplains. And they have been encouraged to do so by what Gilbert M. Gaul reveals in *The Geography of Risk* to be a confounding array of federal subsidies, tax breaks, low interest loans, grants, and government flood insurance that shift the risk of life at the beach from private investors to public taxpayers, radically distorting common notions of risk. These federal incentives, Gaul argues, have resulted in one of the worst planning failures in American history, and the costs to taxpayers are reaching unsustainable levels. We have become responsible for a shocking array of coastal amenities: new roads, bridges, buildings, streetlights, tennis courts, marinas, gazebos, and even spoiled food after hurricanes. *The Geography of Risk* will forever change the way you think about the coasts, from the clash between economic interests and nature to the heated politics of regulators and developers.
