Cognitive Linguistics and Language Evolution Michael Pleyer, Stefan Hartmann, 2024-03-28 The evolution of language has developed into a large research field Two questions are particularly relevant for this strand of research firstly how did the human capacity for language emerge And secondly which processes of cultural evolution are involved both in the evolution of human language from non linguistic communication and in the continued evolution of human languages Much research on language evolution that addresses these two questions is highly compatible with the usage based approach to language pursued in cognitive linguistics Focusing on key topics such as comparing human language and animal communication experimental approaches to language evolution and evolutionary dynamics in language this Element gives an overview of the current state of the art of language evolution research and discusses how cognitive linguistics and research on the evolution of language can cross fertilise each other This title is also available as Open Access on Cambridge Core

Globalization and Animal Law Thomas G. Kelch, 2017-05-01 The rise of the globalized economy has rendered an even more profound change in the relationship between humans and other animals than the ancient progression from huntergatherer to agricultural society In today's global markets multinational corporations exploit the economic value of animals throughout the world on an unprecedented scale The philosophical and legal notions that animals are mere unfeeling machines or pieces of property although more or less taken for granted for centuries has been challenged if not burst asunder in recent decades in law moral philosophy and cognitive and other sciences and regulation of the treatment of animals in agriculture experimentation entertainment and other areas has begun to make

substantial inroads in national and international law This book provides a detailed analysis of international and comparative animal law focusing on the impact of today's globalized economy on animal law Describing a wide range of domestic and international laws relating to the treatment of animals the author explicates the sorts of legal rules which affect the global animal marketplace Representative norms in existing animal protection laws are analyzed and critiqued illustrating the diverse approaches taken by different countries and by the international community in regulating uses of animals Among the issues covered are the following contemporary philosophical thought on the relationship between humans and animals recent scientific research relating to cognitive and other abilities of animals legal issues relating to factory farming and animal slaughter legal protection of animals during transport regulatory schemes on animal experimentation laws on the use of animals in entertainment laws on protection of companion animals regulation of trade in endangered species international trade issues relating to animals including consideration of the provisions of GATT and the seminal WTO GATT decisions in the Tuna Dolphin Shrimp Turtle Tuna Labeling and EU Seal Products cases constitutional protection for the interests of animals intellectual property law issues relating to animals efforts to have the legal personhood of certain animals judicially recognized and what the future may hold for animal law in the global economy To ensure the consideration of a full range of legal approaches the laws analyzed come from a wide variety of countries and jurisdictions including Australia Austria Brazil Canada the EU Germany India Ireland New Zealand Switzerland the UK and state and federal laws of the US Numerous international treaties and conventions relevant to animal treatment and animal law are also covered including the Berne Convention for the Protection of Literary and Artistic Works the CITES Convention the European Convention for the Protection of Animals Kept for Farming Purposes the European Patent Convention the GATT Treaty the TRIPS Agreement and the Universal Copyright Convention It is not difficult to grasp given the continuing increases in production consumption and use of animals and animal products worldwide that legal initiatives in this often emotional and acrimonious area of law are frequently contentious and hard fought But this is really just the dawn of animal law which has only recently become recognized as an important cutting edge topic and this area of the law promises to develop rapidly in the future This book is enormously valuable in contributing to the continuing development and understanding of this law clearly laying out the contours and boundaries of existing animal laws in our global economy and allowing legal educators concerned lawyers and policymakers to teach formulate proposals argue cases and defenses and secure a firm purchase on future trends and developments in animal law

The Missing Lemur Link Ivan Norscia, Elisabetta Palagi, 2016-06-09 Lemurs share a common distant ancestor with humans Following their own evolutionary pathway lemurs provide the ideal model to shed light on the behavioural traits of primates including conflict management communication strategies and society building and how these aspects of social living relate to those found in the anthropoid primates Adopting a comparative approach throughout lemur behaviour is cross examined with that of monkeys apes and humans This book reviews and expands upon

the newest fields of research in lemur behavioural biology including recent analytical approaches that have so far been limited to studies of haplorrhine primates Different methodological approaches are harmonised in this volume to break conceptual walls between both primate taxa and different disciplines Through a focus on the methodologies behind lemur behaviour and social interactions future primate researchers will be encouraged to produce directly comparable results

The Emergence and Evolution of Religion Jonathan Turner,Alexandra Maryanski,Anders Klostergaard Petersen,Armin W. Geertz,2017-08-10 Written by leading theorists and empirical researchers this book presents new ways of addressing the old question Why did religion first emerge and then continue to evolve in all human societies The authors of the book each with a different background across the social sciences and humanities assimilate conceptual leads and empirical findings from anthropology evolutionary biology evolutionary sociology neurology primate behavioral studies explanations of human interaction and group dynamics and a wide range of religious scholarship to construct a deeper and more powerful explanation of the origins and subsequent evolutionary development of religions than can currently be found in what is now vast literature While explaining religion has been a central question in many disciplines for a long time this book draws upon a much wider array of literature to develop a robust and cross disciplinary analysis of religion The book remains true to its subtitle by emphasizing an array of both biological and sociocultural forms of selection dynamics that are fundamental to explaining religion as a universal institution in human societies In addition to Darwinian selection which can explain the biology and neurology of religion the book outlines a set of four additional types of sociocultural natural selection that can fill out the explanation of why religion first emerged as an institutional system in human societies and why it has continued to evolve over the last 300 000 years of societal evolution These sociocultural forms of natural selection are labeled by the names of the early sociologists who first emphasized them and they can be seen as a necessary supplement to the type of natural selection theorized by Charles Darwin Explanations of religion that remain in the shadow cast by Darwin s great insights will it is argued remain narrow and incomplete when explaining a robust sociocultural phenomenon like religion

Developments in Primate Gesture Research Simone Pika,Katja Liebal,2012-06-12 The book is a themed mutually referenced collection of articles from a very high powered set of authors based on the workshop on Current developments in non human primate gesture research which was held in July 2010 at the European University Viadrina Frankfurt Oder Germany The motivation for this book following on from the motivation for the workshop series was to present the state of the art in non human primate gesture research with a special emphasis on its history interdisciplinary perspectives developments and future directions This book provides for the first time in a single volume the most recent work on comparative gestural signaling by many of the major scholars in the field such as W D Hopkins D Leavens T Racine J van Hooff and S Wilcox in alphabetical order

The Fear Factor Abigail Marsh,2017-10-10 In this compelling scientific detective story a leading neuroscientist looks for the nature of human kindness in the brains of heroes and psychopaths Wall

Street Journal At fourteen Amber could boast of killing her guinea pig threatening to burn down her home and seducing men in exchange for gifts She used the tools she had available to get what she wanted and she didn't care about the damage she inflicted A few miles away Lenny Skutnik was so concerned about the life of a drowning woman that he jumped into the ice cold river to save her How could Amber care so little about others lives while Lenny cared so much Abigail Marsh studied the brains of both psychopathic children and extreme altruists and found that the answer lies in our ability to recognize others fear And as The Fear Factor argues by studying people who demonstrate heroic and evil behaviors we can learn more about how human morality is coded in the brain A path breaking read The Fear Factor is essential for anyone seeking to understand the heights and depths of human nature **The Language of Life** James Lull, Eduardo Neiva, 2012-05-29

Communication in its most basic form the sending of signals and exchange of messages within and between organisms is the heart of evolution From the earliest life forms to Homo sapiens the great chain of communication drives the evolutionary process and is the indispensable component of human culture That is the central message of this unique perspective on both the biological evolution of life and the human development of culture The book explores the totality of communication processes that create and sustain biological equilibrium and social stability The authors argue that this ubiquitous connectivity is the elemental unity of life Introducing a new subdiscipline evolutionary communication the authors analyze the core domains of life sheer survival sex culture morality religion and technological change as communications phenomena What emerges from their analysis is a brilliant interpretation of life interconnected through communication from the basic molecular level to the most sophisticated manifestations of culture Challenging the boundaries of conventional approaches to cultural analysis this is an original and engaging view of evolution and an encouraging prognosis for our collective future

Xenolinguistics Douglas A. Vakoch, Jeffrey Punske, 2023-09-06 Xenolinguistics brings together biologists anthropologists linguists and other experts specializing in language and communication to explore what non human non Earthbound language might look like The 18 chapters examine what is known about human language and animal communication systems to provide reasonable hypotheses about what we may find if we encounter non Earth intelligence Showcasing an interdisciplinary dialogue between a set of highly established scholars this volume Clarifies what is and is not known about human language and animal communication systems Presents speculative arguments as a philosophical exercise to help define the boundaries of what our current science can tell us about non speculative areas of investigation Provides readers with a clearer sense of how our knowledge about language is better informed through a cross disciplinary investigation Offers a better understanding of future avenues of research on language This rich interdisciplinary collection with chapter authors including Noam Chomsky Derek Ball Denise Herzing and Irene Pepperberg will be of interest to researchers and students studying non human communication astrobiology and language invention **The Handbook of Speech**

Production Melissa A. Redford, 2019-02-12 The Handbook of Speech Production is the first reference work to provide an

overview of this burgeoning area of study Twenty four chapters written by an international team of authors examine issues in speech planning motor control the physical aspects of speech production and external factors that impact speech production Contributions bring together behavioral clinical computational developmental and neuropsychological perspectives on speech production to create a rich and truly interdisciplinary resource Offers a novel and timely contribution to the literature and showcases a broad spectrum of research in speech production methodological advances and modeling Coverage of planning motor control articulatory coordination the speech mechanism and the effect of language on production processes

What the Face Reveals Erika L. Rosenberg, Paul Ekman, 2020 The Facial Action Coding System FACS is a comprehensive anatomically based system for describing all observable facial movement It has been used for research on the psychology of emotion to understand mental health to detect deception and to drive the computer generated images in special effects This book includes original studies using FACS the study of spontaneous behavior in both humans and animals that cuts across several fields including Psychology Medicine Law and Veterinary Medicine

Interdisziplinäre Anthropologie Gerald Hartung, Matthias Herrgen, 2016-12-15 Das Jahrbuch widmet sich dem zentralen anthropologischen Thema Wahrnehmung Im Fokus der Diskussion steht der Beitrag von Georg Toepfer zu deren Biologie und Anthropologie und zur Frage nach der Kopplung und Entkopplung von Organismus und Umwelt F r die Interdisziplinäre Anthropologie ist eine systematische Analyse des Ph nomens der Wahrnehmung in mehrfacher Hinsicht von geradezu paradigmatischem Charakter treffen hier doch die klassisch gewordenen philosophischen Theorien auf die experimentell verfahrenenden Wissenschaften

The Oxford Handbook of Social Neuroscience Jean Decety, John T. Cacioppo, 2015-04-15 The complexities of the brain and nervous system make neuroscience an inherently interdisciplinary pursuit one that comprises disparate basic clinical and applied disciplines Behavioral neuroscientists approach the brain and nervous system as instruments of sensation and response cognitive neuroscientists view the same systems as a solitary computer with a focus on representations and processes The Oxford Handbook of Social Neuroscience marks the emergence of a third broad perspective in this field Social neuroscience emphasizes the functions that emerge through the coaction and interaction of conspecifics the neural mechanisms that underlie these functions and the commonality and differences across social species and superorganismal structures With an emphasis on the neural hormonal cellular and genetic mechanisms underlying social behavior social neuroscience places emphasis on the associations and influences between social and biological levels of organization This complex interdisciplinary perspective demands theoretical methodological statistical and inferential rigor to effectively integrate basic clinical and applied perspectives on the nervous system and brain Reflecting the diverse perspectives that make up this field The Oxford Handbook of Social Neuroscience brings together perspectives from across the sciences in one authoritative volume

Encyclopedia of Biometrics Stan Z. Li, 2009-08-27 With an A Z format this encyclopedia provides easy access to relevant information on all aspects of biometrics It features approximately 250 overview entries and 800

definitional entries Each entry includes a definition key words list of synonyms list of related entries illustration s applications and a bibliography Most entries include useful literature references providing the reader with a portal to more detailed information Personality and Temperament in Nonhuman Primates Alexander Weiss,James E. King,Lindsay Murray,2011-08-10 Recently there has been an increased interest in research on personality temperament and behavioral syndromes henceforth to be referred to as personality in nonhuman primates and other animals This follows in part from a general interest in the subject matter and the realization that individual differences once consigned to error terms in statistical analyses are potentially important predictors moderators and mediators of a wide variety of outcomes ranging from the results of experiments to health to enrichment programs Unfortunately while there is a burgeoning interest in the subject matter findings have been reported in a diverse number of journals and most of the methodological and statistical approaches were developed in research on human personality The proposed volume seeks to gather submissions from a variety of specialists in research on individual differences in primate temperament personality or behavioral syndromes We anticipate that chapters will cover several areas The first part of this edited volume will focus on methodological considerations including the advantages and disadvantages of different means of assessing these constructs in primates and introduce some statistical approaches that have typically been the domain of human personality research Another part of this edited volume will focus on present findings including the physiological and genetic bases of personality dimensions in primates the relationship between personality and age how personality may moderate or impact various outcomes including behavior health and well being in captive and non captive environments For the third part of the volume we hope to obtain summaries of the existing work of the authors on the evolutionary important of personality dimensions and guideposts for future directions in this new and exciting area of research On Human Nature Jonathan H. Turner,2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex
