Cultivating Regionalism Kenneth H. Wheeler, 2011-11-01 In this ambitious book Kenneth Wheeler revises our

understanding of the nineteenth century American Midwest by reconsidering an institution that was pivotal in its making the small college During the antebellum decades Americans built a remarkable number of colleges in the Midwest that would help cultivate their regional identity Through higher education the values of people living north and west of the Ohio River formed the basis of a new Midwestern culture Cultivating Regionalism shows how college founders built robust institutions of higher learning in this socially and ethnically diverse milieu Contrary to conventional wisdom these colleges were much different than their counterparts in the East and South not derivative of them as many historians suggest Manual labor programs for instance nurtured a Midwestern zeal for connecting mind and body And the coeducation of men and women at these schools exploded gender norms throughout the region Students emerging from these colleges would ultimately shape the ethos of the Progressive era and in large numbers take up scientific investigation as an expression of their egalitarian production oriented training More than a history of these antebellum schools this elegantly conceived work exposes the interplay in regionalism between thought and action who antebellum Midwesterners imagined they were and how they built their colleges in distinct ways

Piercing the Fog of War Martin Samuels, 2019-05-14 Since the late 1970s anglophone and German military literature has been fascinated by the Wehrmacht's command system especially the practice of Auftragstaktik There have been many descriptions of the doctrine and examinations of its historical origins as well as unflattering comparisons with the approaches of the British and American armies prior to their adoption of Mission Command in the late 1980s Almost none of these however have sought to understand the different approaches to command in the context of a fundamental characteristic of warfare friction This would be like trying to understand flight without any reference to aerodynamics Inherently flawed yet this is the norm in the military literature This book seeks to address that gap First the nature of friction and the potential command responses to it are considered This allows the development of a typology of eight command approaches each approach then being tested to identify its relative effectiveness and requirements for success Second the British and German armies' doctrines of command during the period are examined in order to reveal similarities and differences in relation to their perspective on the nature of warfare and the most appropriate responses The experience of Erwin Rommel both as a young subaltern fighting the Italians in 1917 and then as a newly appointed divisional commander against the French in 1940 is used to test the expression of the German doctrine in practice Third the interaction of these different command doctrines is explored in case studies of two key armoured battles Amiens in August 1918 and Arras in May 1940 allowing the strengths and weaknesses of each to be highlighted and the typology to be tested The result is intended to offer a new and deeper understanding of both the nature of command as a response to friction and the factors that need to be in place in order to allow a given command approach to achieve success The book therefore in two ways represents a sequel to the author's earlier work *Command or Control: Command Training and Tactics in the British and German Armies 1888-1918* London Cass 1995 in that it both takes the conceptual model of command
