Colares, Mustafa T. Durmuş, 2021-07-27 To avoid trade bargain erosion countries involved in large scale bilateral or regional trade arrangements must reconcile preserving close economic ties and supply chains with the need to dynamically adjust to new opportunities with other partners Using the growing deterioration of the European Union Turkey Customs Union as an illustration to a new model of trade agreement restructuring this well researched and deeply insightful book outlines and demonstrates how this trade arrangement can be successfully renegotiated thus providing expert practical guidance in a crucial area of trade law and policy that rarely receives the attention it deserves The book's novel

framework features a clearly articulated legal foundation a transactional deployment strategy and a sequential negotiating approach applicable to bilateral and regional trade arrangements whose original terms no longer reflect the changed capabilities and interests of at least one of its parties The authors respond in detail to questions such as When should a country pursue bargain rebalancing How should trade diplomats pursue renegotiation and or new partnerships legally and transactionally Given that free trade agreements keep each country s trade sovereignty mostly intact under which circumstances should a country ever consider entering a customs union How may free trade agreements help countries address trade imbalances while enhancing supply chain resilience What are the limits to WTO litigation as an effective market barrier opening tool How should trade agreement restructuring be deployed as a path to further trade liberalization In depth attention is paid to identifying and investigating trade arrangements that are ripe for renegotiation and assessing sources of domestic and external support for or against renegotiating such bargains This book s model of international trade agreement restructuring fits well with emerging thinking on greater trade diversification and supply chain resilience The authors provide a clear actionable approach for considering and conducting the renegotiation of trade deals For these reasons this book will be welcomed by trade lawyers supply chain executives economists government officials and academics who are grappling with rising economic frictions in the fault lines of national sovereignty economic interdependence and the limits of current trade arrangements

topics is how to finance these goals There is a widespread belief that coming up with more money for sustainable development will do the trick Usually the discussions focus on finding additional financial resources in order to achieve the goals faster In this book it is argued that not only is more money needed but it needs to be a different kind of money The book demonstrates that ALL but one of the SDGs are directly linked to our monetary system which being completely unnatural can be seen as the most important but at the same time least recognized reason for market failure Many people think we just need to do more faster better Very few say that we have done things fundamentally wrong and that the institutions and values which motivated us to do those things need to be changed It will be concluded that only if we change our unnatural design of money to a more natural one will we be able to reach these goals **Books in Print** ,1991
