Databases for Data-Centric Geotechnics Kok-Kwang Phoon, Chong Tang, 2024-12-20. Databases for Data-Centric Geotechnics forms a definitive reference and guide to databases in geotechnical and rock engineering to enhance decision making in geotechnical practice using data-driven methods. This first volume pertains to site characterization. The opening chapter presents an in-depth analysis of site data attributes including the establishment of a new taxonomy of site data under 4S site generalizations: spatial features, sampling characteristics, and smart data, to provide a novel agenda for data-driven site characterization. Type 3 machine learning methods, disruptive value, are possible as sensors become more pervasive and more intelligent. A comprehensive overview of site characterization information is also presented with a focus on its availability, coverage, value to decision making, and challenges. The remaining 13 chapters cover databases of soil and rock properties and the application of these databases to rock socket behavior, rock classification, settlement on soft marine clays, permeability of fine-grained soils, and liquefaction, among others. The databases were compiled from studies undertaken in many countries including Austria, Australia, Brazil, Canada, China, France, Finland, Germany, India, Iran, Japan, Korea, Malaysia, Mexico, New

Zealand Norway Singapore Sweden Thailand the United Kingdom and the United States This volume on site characterization is a companion to the volume on geotechnical structures Databases for Data Centric Geotechnics represents the most diverse and comprehensive assembly of database research in a single publication consisting of two volumes to date It follows from Model Uncertainties for Foundation Design also published by CRC Press and suits specialist geotechnical engineers researchers and graduate students *Construction Technology For Tall Buildings (4th Edition)* Yit Lin Michael Chew, 2012-06-04 This book introduces the latest construction practices and processes for tall buildings from foundation to roof It attempts to acquaint readers with the methods materials equipment and systems used for the construction of tall buildings The text progresses through the stages of site investigation excavation and foundations basement construction structural systems for the superstructure site and material handling wall and floor construction cladding and roof construction The construction sequence merits and limitations of the various proprietary systems commonly used in these respective stages are discussed This fourth edition also includes several new topics not covered in the previous edition The target readers are practitioners and students in the related professions including architecture engineering building real estate construction project and facilities management and quantity and land surveying Proceedings of the First Southern African Geotechnical Conference S.W.
