Strategic Autonomy and Economic Power Vitor Bento, 2022-08-04 This book examines the effect of economic power on a state's strategic autonomy. Strategic autonomy is a fundamental condition for the availability of strategic options in the interaction of states. This book provides the first clear operational definition of the concept and offers an analysis of the relevance of the national economy to strategic autonomy. The main sources of economic power, size of the economy, position in trade and technological networks, savings, wealth, and finance, and their impact on strategic autonomy are analyzed in depth. The strategic governance of the national economy is also addressed as a way of ensuring that national economic power can work as strategic power for a country, providing it with strategic autonomy. The strategies pursued by China, which in under four decades has gone from an underdeveloped state to the main challenger of the dominant world power, and Germany, which despite being defeated in World War II, having no nuclear weapons and having chosen to be a civilian power, became the dominant power in Europe, are analyzed in depth as two paradigmatic examples of the theory developed by the book. This book will be of much interest to students of strategic studies, economics, foreign policy, and International Relations. *Solving Social Dilemmas* Roger D. Congleton, 2022 In *Solving Social Dilemmas*, Roger Congleton provides an explanation for the rise of prosperous commercial societies. Congleton argues that an endless series of social, economic, and political dilemmas have to be solved or ameliorated to sustain social and economic progress, and suggests that the most plausible solutions involve internalized rules of conduct. Previous foundational texts suggest that institutions often emerge to address social dilemmas, but Congleton focuses on a solution that is arguably prior to formal institutions: the internalization of principles and rules of conduct that directly affect individual behavior and group outcomes. **Fishing, Foraging and Farming in the Bolivian Amazon** Lisa Ringhofer, 2009-12-01 Empirical in character, this book analyses the society-nature interaction of the Tsimane, a rural indigenous community in the Bolivian Amazon. Following a common methodological framework, the material and energy flow MEFA approach, it gives a detailed account of the biophysical exchange relations the community entertains with its natural environment, the socio-economic use of energy, materials, land, and time. Equally so, the book provides a deeper insight into the local base of sociometabolic transition processes and their inherent dynamics of change. The local community described in this publication stands for the many thousands of rural systems in developing countries that, in light of an ever more globalising world, are currently steering a similar but maybe differently paced development course. This book presents insightful methodological and conceptual advances in the field of sustainability science and provides a vital reader for students and researchers of human ecology, ecological anthropology, and environmental sociology. It equally contributes to improving professional development work methods. *Cultural Economics and Theory* David Boyce Hamilton, 2010 David Hamilton has advanced heterodox economics by replacing intellectual concepts from orthodox economics that hinder us with concepts that help us. This book brings together the essential works of David Hamilton over a fifty-year period. **United**

**Contesting Hydropower in the Brazilian Amazon** Ed Atkins,2020-11-15 In *Contesting Hydropower in the Brazilian Amazon* Ed Atkins focuses on how local national and international civil society groups have resisted the Belo Monte and S o Luiz do Tapaj s hydroelectric projects in Brazil In doing so Atkins explores how contemporary opposition to hydropower projects demonstrate a form of contested sustainability that highlights the need for sustainable energy transitions to take more into account than merely greenhouse gas emissions The assertion that society must look to successfully transition away from fossil fuels and towards sustainable energy sources often appears assured in contemporary environmental governance However what is less certain is who decides which forms of energy are deemed sustainable *Contesting Hydropower in the Brazilian Amazon* explores one process in which the sustainability of a green energy source is contested It focuses on how civil society actors have both challenged and reconfigured dominant pro dam assertions that present the hydropower schemes studied as renewable energy projects that contribute to sustainable development agendas The volume also examines in detail how anti dam actors act to render visible the political interests behind a project whilst at the same time linking the resistance movement to wider questions of contemporary environmental politics This interdisciplinary work will be of great interest to students and scholars of sustainable development sustainable energy transitions environmental justice

Giordanengo, 2025-04-01 Emerging from the fields of ecological restoration and economics this interdisciplinary book delivers a clear path to restoring our economies in a way that speaks well to industry groups and business owners students and the general public and to policy makers There are proven relationships between ecology and economics Giordanengo employs those relationships in an intriguing way and integrates them with global case studies to argue that redesigning economic systems according to ecological principles is necessary to balancing critical social environmental and economic goals For example he reveals how more obscure ecological principles and theories succession evolution diversity productivity curves and so on can inform the restructuring of economic systems that are resilient productive and regenerative A variety of students and practitioners have read the first edition or attended John s seminars only to remark Why haven t we learned this in our traditional coursework or This book brings so much clarity to the fields of sustainability and environmental sciences Traditional approaches to sustainability focus on the social environmental and economic pillars of an economy while paying little attention to the foundation those pillars rest upon A comprehensive focus on our economy s foundational components has been ignored for good reason we have lacked an understanding of what they are or how they interact with one another Cross cutting research between ecological and economic systems reveals three foundational components i e drivers common to both systems The effective management of these components is perhaps the most important obstacle to resolving current tensions between society nature and the global market economy The scale at which diversity energy and trade must be managed is also justified by self regulating ecosystems such as jungles prairies and pine forests That scale is not global nor is it hyper local The economic and ecological rationale agree that the scale of a sustainable economy the natural geography of humans is regional To the contrary the attempt to manage our economy at a global scale has given rise to chronic social environmental and economic symptoms across earth In highly developed countries such as the United States these symptoms include flat real wages and productivity growth a growing wealth gap degraded environmental conditions rising social unrest and more The closing chapters outline a natural path for restoring our economies illuminated by humanities shared experience in ecological restoration The process of ecosystem recovery

following disturbance i.e. succession is one such pathway Unwittingly developed nations such as the United States manage succession to concentrate wealth into fewer hands while lowering the economy's productive capacity net productivity and resistance to future disturbances Economic policies can also move the succession dial toward the productive and diverse center where wealth and resources are recirculated quickly new business opportunities are created and resilience and resistance are fortified a stout shield in the face of global economic turmoil For policymakers consumers and industry groups this book explores root causes of the challenges you face so that you may take deep correct actions to yield lasting change Giordanengo provides critique but goes further with clear steps that individuals businesses communities and policymakers can take to start restoring our economies now From agricultural restoration to regional manufacturing and energy systems he outlines practical strategies and policy mechanisms for building regenerative economies Students will find not just theoretical and systems knowledge but applied economics ecology and conservation centered around actionable pathways Economic restoration is not only possible it is our humanitarian duty
