Congress,1959 **Natural Deduction, Hybrid Systems and Modal Logics** Andrzej Indrzejczak,2010-07-03 A good title should be informative enough to illuminate a potential reader on the content of a book We hope that the present title gives at least some hints of what this book is about The notion of natural deduction or modal

logic are rather well known but the notion of hybrid system certainly needs some explanation In short this study may be seen as a kind of search for good deductive systems We think of systems good in practice which may be applied with ease not only by well trained logicians but also for example by philosophers who need handy deductive tools accompanying their analyses In part I we are interested in providing systems that may be widely applied in teaching logic Nowadays one may observe that several courses in critical thinking tend to eliminate courses in practical logic On the other hand logic is often taught as a strictly mathematical discipline in very demanding courses It is important to fill the gap between these extrema and the crucial ingredient of any course which is supposed to teach how to use logic is certainly a suitable deductive system Since we address this work to a wide audience interested in applications of logic we were trying to make it self contained and accessible to a reader with no hard training in logic The assumed reader should have some background in logic an elementary course covering classical propositional and first order logic with basics of set theory is enough but not necessarily in modal logic
