**In the Shadow of the Machine** Jeremy Naydler, 2018-05-29 Contemporary life is so deeply reliant upon digital technology that the computer has come to dominate almost every aspect of our culture What is the philosophical and spiritual significance of this dependence on electronic technology both for our relationship to nature and for the future of humanity And what processes in human perception and awareness have produced the situation we find ourselves in As Jeremy Naydler elucidates in this penetrating study we cannot understand the emergence of the computer without seeing it within the wider context of the evolution of human consciousness which has taken place over millennia Modern consciousness he shows has evolved in conjunction with the development of machines and under their intensifying shadow The computer was the product of a long historical development culminating in the scientific revolution of the 17th century It was during this period that the first mechanical calculators were invented and the project to create more complex thinking machines began in earnest But the seeds were sown many hundreds of years earlier deep in antiquity Naydler paints a vast panorama depicting human development and the emergence of electronic technology His painstaking research illuminates an urgent question that concerns every living person today What does it mean to be human and what if anything distinguishes us from machines

*Quantum Mind and Social Science* Alexander Wendt, 2015-04-20 There is an underlying assumption in the social sciences that consciousness and social life are ultimately classical physical material phenomena In this ground breaking book Alexander Wendt challenges this assumption by proposing that consciousness is in fact a macroscopic quantum mechanical phenomenon In the first half of the book Wendt justifies the insertion of quantum theory into social scientific debates introduces social scientists to quantum theory and the philosophical controversy about its interpretation and then defends the quantum consciousness hypothesis against the orthodox classical approach to the mind body problem In the second half he develops the implications of this metaphysical perspective for the nature of language and the agent structure problem in social ontology Wendt's argument is a revolutionary development which raises fundamental questions about the nature of social life and the work of those who study it

**Stepping Away from the Silos** Margaret Coutts, 2016-11-10 For over twenty years digitisation has been a core element of the modern information landscape The digital lifecycle is now well defined and standards and good practice have been developed for most of its key stages There remains however a widespread lack of coordination of digitisation initiatives both within and across different sectors and there are disparate approaches to selection criteria The result is silos of digitised content Stepping away from the Silos examines the strategic context in the UK since the 1990s and its effect on collaboration and coordination of exemplar digitisation initiatives in higher education and related sectors It identifies the principal criteria for content selection that are common to the international literature in this field The outputs of the exemplar projects are examined in relation to these criteria A range of common practices and patterns in content selection appears to have developed over time forming a de facto strategy from which several areas of critical mass have emerged The book discusses the potential to improve strategic collaboration and coordinated selection by building on such a platform and considers planning options in the context of work on national digitisation strategies in the UK and internationally Summarises the rise of publicly funded digitisation in the UK from the 1990s to date and identifies the

need to improve coordination and content selection criteria Reviews the role of digitisation in government and organisational strategies from the 1990s to the present day Examines the strategic position of collaboration within and across different organisations Identifies common selection criteria and outlines the coverage of exemplar projects Discusses the apparent emergence of a de facto selection strategy and the potential for national strategic planning of digitised content based on existing outputs and improved collaboration      **Handbook of Cognitive Linguistics** Ewa Dabrowska,Dagmar
