**The Nature of the Page** Joshua Calhoun, 2020-01-24 An innovative study of books and reading that focuses on papermaking in the Renaissance. In *The Nature of the Page*, Joshua Calhoun tells the story of handmade paper in Renaissance England and beyond. For most of the history of printing, paper was made primarily from recycled rags, so this is a story about using old clothes to tell new stories about plants used to make clothes and about plants that frustrated papermakers' best attempts to replace scarce natural resources with abundant ones. Because plants like humans are susceptible to the ravages of time, it is also a story of corruption and the hope that we can preserve the things we love from decay. Combining environmental and bibliographical research with deft literary analysis, Calhoun reveals how much we have left to discover in familiar texts. He describes the transformation of plant material into a sheet of paper, details how ecological availability or scarcity influenced literary output in the sixteenth and seventeenth centuries, and examines the impact of the various colors and qualities of paper on early modern reading practices. Through a discussion of sizing (the mixture used to coat the surface of paper so that ink would not blot into its fibers), he reveals a surprising textual interaction between animals and readers. He shows how we might read an indistinct stain on the page of an early modern book to better understand the mixed-media surfaces on which readers, writers, and printers recorded and revised history. Lastly, Calhoun considers how early modern writers imagined paper decay and how modern scholars grapple with biodeterioration today. Exploring the poetic interplay between human ideas and the plant, animal, and mineral forms through which they are mediated, *The Nature of the*

Page prompts readers to reconsider the role of the natural world in everything from old books to new smartphones

Composing under the Skin Paul Craenen, 2014-04-29 A revealing study of the physical presence of the musician in musical performance. Fingers slipping over guitar strings, the tap of a bow against the body of a cello, a pianist humming along to the music. Contemporary composers often work with parasitic, non-conventional sounds such as these. Are they to be perceived as musical elements or do they shift attention to the physical effort of music making? Contact between a body and an instrument. Composer Paul Craenen explores ways in which the musician's body is revealed in musical performance. He leads us from Cage, Lachenmann, Kagel and their contemporaries to a discussion of how today's generation of young composers is writing a body paradigm into composition itself. Micro-temporal physical gestures and instrumental timbre provide the key to unveiling the physical presence of both a musician and a composing body. The author's concept of intercorporeality, along with the idea of an alternating linear and non-linear relationship of the composing body to time, casts new light on the relationship between musicians, composers and music consumers.

Rast,2014-05-02 This book gives a comprehensive presentation of our present understanding of the Earth s Hydrological cycle and the problems consequences and impacts that go with this topic Water is a central component in the Earth s system It is indispensable for life on Earth in its present form and influences virtually every aspect of our planet s life support system On relatively short time scales atmospheric water vapor interacts with the atmospheric circulation and is crucial in forming the Earth s climate zones Water vapor is the most powerful of the greenhouse gases and serves to enhance the tropospheric temperature The dominant part of available water on Earth resides in the oceans Parts are locked up in the land ice on Greenland and Antarctica and a smaller part is estimated to exist as groundwater If all the ice over the land and all the glaciers were to melt the sea level would rise by some 80 m In comparison

the total amount of water vapor in the atmosphere is small it amounts to 25 kg m<sup>2</sup> or the equivalent of 25 mm water for each column of air Yet atmospheric water vapor is crucial for the Earth s energy balance The book gives an up to date presentation of the present knowledge Previously published in Surveys in Geophysics Volume 35 No 3 2014     **Food &**

Mary C. Fabrizio, Mark J. Henderson, Kenneth Alan Rose, Pierre Petitgas, 2022-11-23      Cancer Immunotherapy & Immuno-monitoring: Mechanism, Treatment, Diagnosis, and Emerging Tools Chao Ma, Rong Fan, Antoni Ribas, 2014-12-16 In the past decade, significant progress has taken place in the field of cancer immunotherapy. Tumor-targeting immunotherapies are being developed for most human cancers, including melanoma, prostate cancer, glioblastoma, sarcoma, lung carcinoma and hepatocellular carcinoma. The FDA has approved multiple molecular immunotherapeutics such as Ipilimumab. Cellular immunotherapies, e.g. adoptive cell transfer, are being tested in phase II/III clinical trials.

Immunotherapeutics has evolved into a sophisticated field. Multimodal therapeutic regimens are administered to induce focused responses, curtail side effects, and improve therapeutic efficacy. The lack of effective clinical assessment tools remains a major challenge. Because of the intricacy of antitumor response, it is essential to scrutinize individual tumor targeting immune cells and their functions at the finest details. In this regard, flow cytometry analysis, modernized hematology, and allows characterization of surface molecular signature on individual cells. More recently, microchip technologies and new variations of cytometry have enormously expanded the spectrum, throughput, and multiplexity of single cell analysis. Nowadays, tens of millions of readouts can be generated through the course of a cancer immunotherapy to monitor the abundance phenotype and a myriad of effector functions of single immune cells. At the same time, big data analytics and data mining methodologies have been adapted to achieve sensible diagnostic interpretations. Such a marriage of technology and analytics opens the door for informative point of care assessment of therapeutic efficacy and ensures timely therapeutic decisions. The new generation of personalized clinical diagnostics will revolutionize healthcare in the years to come.

*Megacities and the Coast* Mark Pelling, Sophie Blackburn, 2014-01-03. Based on a major international study, this volume provides a synthesis of scientific knowledge on megacity urbanization on the coast, environmental impacts, risks, and management choices, including a focus on adaptation, mitigation, and disaster risk management. It is the primary output of a major international scientific project sponsored by the International Geosphere Biosphere Programme, the Land Ocean Interactions at the Coastal Zone programme of IHDP, IGBP, and others. It brings together the work of over 60 contributing authors and an international review board. It presents the international policy and academic community with an unbiased and high quality assessment of the state of the art in areas of social ecological systems interaction. One of its main messages is that while we know a great deal about megacities of more than ten million people and about urban processes and about coasts and their physical and ecological processes, aquatic, physical, and atmospheric, there is relatively little work that focusses primarily at points of intersection between large scale urbanization and the coast. The book responds to this gap by providing the first global synthesis of megacity and large urban region urbanization on the coast. Its focus is on environmental and development challenges, climate change, and disaster. It is interdisciplinary and brings together world recognised scientists, including many IPCC lead authors on urban climate and atmosphere, disaster risk management, demography, and coastal environments.
