Synchronous Programming Ali S. Janfada,2019-06-04 Algorithms are the essence of programming After their construction
they have to be translated to the codes of a specific programming language There exists a maximum of ten basic algorithmic
templates This textbook aims to provide the reader with a more convenient and efficient method to create a program by
translating algorithms template by template with C and Java This is the slogan of the book You will be a professional
programmer whenever you become a skilled algorithm designer This book attempts to gradually strengthen the readers
ability to identify and analyze the mental commands which are issued and implemented in their brains for solving the
problems in which mathematical computations are applied and try to design an algorithm based on their understanding and
analyses It then seeks to encourage the readers to develop their skills in algorithm writing for computational problems and
synchronously teach them to translate the algorithms into C and Java codes using the least necessary keywords **Java in**
