A safe door knob that prevents forced entry

Perfect security using the state-of-the-art personal fingerprint scanning method

Convenient authentication methods aimed to reduce worry over key loss or password hacking. This state-of-the-art fingerprint recognition system increases safety and security. Enhancing user convenience, easy door opening and closing access features, the key pad panel is covered automatically after pressing the door's center open lock button thereby enhancing the security of the fingerprint identification panel. Able to register and recognizing 100 fingerprints, this secure smart door lock system can as well be utilized for small and medium companies.

Dual password and fingerprint scanning input: Double Authentication Mode

With the Double Authentication Mode setting, home security is strengthened and allows for greater security access. Door opening access requires two authentication verifications, both password and fingerprint system input. Therefore it is safer and more secure. (It is imperative that while the Double Authentication Mode is on, you do not forget the password.)

Magic Number Double Security: Password Method

Resident security is heightened by preventing password exposure with the Magic Number Double Security access method. By pre-setting randomly selected numbers prior to entering the password, guessing passwords by fingerprint marks is prevented, therefore doubling security.

Assurance Knob: Secure door knob that prevents forced entry

Pushing the opening button and turning the knob when going out prevents any unauthorized access. Security is guaranteed as the alarm will sound when physical impact or repeated access authentication failure occur, therefore reducing the attempted intrusion. While away, when an alarm sounds when the valid function is initiated.

More Security: Automatic Lock and Double Lock Features

With the Auto Lock feature, the door lock is set to automatically lock the door after a set time and notify about having left the door unlocked. In the case of an emergency, such as a fire, the door can be opened by turning the knob. In the case of a regular emergency, such as a fire, the feature prevents the case of leaving the door open when a child goes out and the case of unauthorized entry attempts through the side inlet.

More Secure in an Emergency: Security assured, Samsung Digital Door Lock

The Samsung Digital Door Lock obtained exceptional grades in all safety and quality certification tests against electric shock, strength and fire prevention. With an advanced circuit design that enables the product to withstand high voltage electrical surges, safety is strengthened. Also, when a temperature of 60 degree Celsius and over is detected inside the resistance, the alarm will sound and the door lock will automatically opened. With a manual open feature, the door can be opened manually if an electronic malfunction occurs.

Neat Sound Adjustment

With this effective function, the sound volume can be adjusted when the number pad is pressed or the door is opened or closed during the time in the event of extra care needed, such as babies, family members, and even neighbors.

Battery Replacement Reminder Feature
When battery replacement time approaches, a reminder sound is played. When the door is opened, the door lock will play a sound to remind you to replace the battery.

Emergency Power Supply Feature
In the event that batteries run out, the door can be opened from the outside by using a 9V battery.

Rare Earth Elements Volker Zepf, 2013-02-14 This thesis deals with Rare Earth Elements REE especially with neodymium used in permanent magnets from a very scientific basis by providing basic research data Despite the fact that REE are newsworthy and very important elements for a considerable bandwidth of today's technologies accompanied by the monopolistic supply situation and Chinese politics there are inexplicable data discrepancies about REE which have been recognized frequently but usually have not been addressed accordingly So this analysis started with the hypothesis that the four application areas namely computer hard disk drives HDD mobile phones wind turbines and e mobility automotive traction account for about 80% of the global annual neodymium demand The research methodology was a laboratory analysis of the composition of used magnets for HDDs and mobile phones and a literature and official report analysis of wind turbine and automotive neodymium use The result was amazing and the hypothesis had to be withdrawn as these four areas only account for about 20% of neodymium use This result raises some questions concerning actual use and thus potential recycling options
