The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991 J. D. Hunley, 2013-03-15. In this definitive study J. D. Hunley traces the program's development from Goddard's early rockets and the German V-2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles. Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology. Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers. He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science. Unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight. Scientific and Technical Aerospace Reports, 1995 America's Space Shuttle World Spaceflight News, National Aeronautics and Space Administration (NASA), 2017-05-04. This unique and historic document provides extraordinary detail about the Space Shuttle's Return to Launch Site RTLS abort procedure. The official NASA astronaut training manuals comprised a major part of the formal flight crew training process and were used by flight controllers as well. These internal NASA manuals were produced by the

Mission Operations Directorate Space Flight Training Division branch at NASA's Johnson Space Center. The manuals and workbooks are extremely detailed and comprehensive and are designed for self study. A full listing of all acronyms and abbreviations used in the text is included. They provide a superb way to learn about Shuttle systems hardware and operational procedures. Special emphasis on crew interaction with the displays, controls, and hardware is included. If an engine fails during the first 4 minutes of ascent, the shuttle cannot achieve orbit. For the first 3 minutes or so of ascent, it cannot even reach a TAL. The only runway near enough to be reached is one near the launch site. In order to reach this runway, the shuttle must literally reverse course and fly back the way it came. The turn to reverse course is called powered pitch-around (PPA) and the timing of PPA is critically important. Since the orbiter is powerless once the main engines are shut down, these engines must be shut down when the orbiter has enough speed and altitude to glide to the runway. Also, in order to safely separate the orbiter from the ET, the ET should have no more than 2 percent propellant remaining. More propellant might slosh around and cause the tank to lurch and collide with the orbiter. Therefore, the shuttle must turn back toward the launch site at the exact instant that will allow it to arrive at MECO with the right amounts of speed, altitude, and propellant. If the RTLS is declared before the time of PPA, the shuttle has to perform what is called fuel wasting. This means pointing the shuttle more vertical, called lofting, to minimize loss of altitude while still flying away from the launch site and runway. This continues until the shuttle must execute PPA and turn back toward the launch site. From this point on, the shuttle thrusts back toward the runway until it reaches MECO conditions. These conditions are specified as 2 percent propellant remaining with the right speed, direction, and altitude to glide to a landing. America's Space Shuttle Lyndon B. Johnson Space Center. NASA Operations Manual Dr. David Baker, 2018-10-30. Established in 1958 in response to Russia's Sputnik 1 launched on 4 October as the world's first artificial satellite, NASA, the National Aeronautics and Space Administration, emerged out of the National Advisory Committee for Aeronautics, which had been formed in 1915. The NASA Operations Manual tells the story of America's civilian space agency, the facilities it operates, where they are, and what they do. It explains how much NASA costs the American taxpayer and looks at what it returns to the taxpayer in benefits to the economy. NASA has forged a niche in modern history that extends beyond the realisation of age-old dreams to leave Earth and explore the heavens; it has become a synonym for achievement, performance, and greatness in setting goals and achieving them, in failing and learning how to recover, in connecting people around the world with international programmes to explore our solar system and live our ambitions, and in improving the lives of people everywhere through its inventions, discoveries, its technology, and its engineering. Sixty years after NASA took hold of the reins of US civilian space programmes, the agency has a bold vision for great and ambitious goals, taking humans back to the Moon and on to Mars, perhaps visiting an asteroid or setting up an interplanetary transport system.

on the way And all the time providing inspiration for a new generation With more than 300 photographs line drawings and charts this book tours the United States describing the centres of excellence and the facilities where rockets are tested satellites are built and humans prepare for space With summary review of research laboratories test rigs experimental platforms and engineering facilities this book describes the 60 years of NASA as it has evolved through changing requirements and expanding capabilities building on the past and preparing for a bold future **NASA Historical Data**
