

CELL CYCLE – INTERPHASE, MITOSIS, CYTOKINESIS

What are the 3 reasons why cells reproduce? Growth, Repair, & Replacement

Why would a cell divide?

- As cells absorb nutrients and get larger, the volume of the cell increases faster than the surface area
- This means that a cell can no longer absorb nutrients and get rid of wastes fast enough to support its demands (volume)
- So what's a cell to do? Solution: divide in 2!

Cell division is a type of asexual reproduction!

Cell Cycle has 3 stages:

1) INTERPHASE

2) MITOSIS

- Prophase
- Metaphase
- Anaphase
- Telophase

3) CYTOKINESIS

INTERPHASE

- Longest phase of the cell cycle (90% of time in Interphase)
- Cell grows & makes proteins
- Replicates its DNA and chromosomes
- Makes organelles for division, like centrioles

Chromosomes:

- Inside nucleus
- Genetic information (DNA)
- After S phase = 2 sister chromatids
- There are different numbers of chromosomes in different species.

How Scientists Research Cells, Third Edition Kristi Lew, 2021-07-01 Since cells are the smallest of all living organisms scientists have had to develop various methods and tools to examine and research them In the 17th century the microscope was invented allowing researchers a glimpse at the cell Today supercomputers put cells and experiments to the test In microbiology laboratories and cancer research centers well trained dedicated scientists work to explore the science of cells making biotechnology a continuously growing field In How Scientists Research Cells Third Edition learn how the first discovery of cells led to the first cloned mammal and additional scientific advancements

Concepts in Cell Biology - History and Evolution Vaidurya Pratap Sahi, František Baluška, 2018-03-01 This book discusses central concepts and theories in cell biology from the ancient past to the 21st century based on the premise that understanding the works of scientists like Hooke Hofmeister Caspary Strasburger Sachs Schleiden Schwann Mendel Nemec McClintock etc in the context of the latest advances in plant cell biology will help provide valuable new insights Plants have been an object of study since the roots of the Greek Chinese and Indian cultures Since the term cell was first coined by Robert Hooke 350 years ago in *Micrographia* the study of plant cell biology has moved ahead at a tremendous pace The field of cell biology owes its genesis to physics which through microscopy has been a vital source for piquing scientists interest in the biology of the cell Today with the technical advances we have made in the field of optics it is even possible to observe life on a nanoscale From Hooke s observations of cells and his inadvertent discovery of the cell wall we have since moved forward to engineering plants with modified cell walls Studies on the chloroplast have also gone from Julius von Sachs experiments with chloroplast to using chloroplast engineering to deliver higher crop yields Similarly advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast once studied by Sachs or actin observed by Bohumil Nemec If physics in the form of cell biology has been responsible for one half of this historical development biochemistry has surely been the other
