

7th Grade Research Paper/Project Ideas and Booklet Information

Throughout the multi-week construction period, each seventh grade student will be required to work on and complete a research paper/project, which will be one part of a science competition booklet. If they are working as part of the team they may turn in a single project but both students are expected to contribute to the final project. The booklet must include final blueprints of their project and will be worth the equivalent of one test grade. The specific requirements are listed below. The bulk of the research needs to be completed at home, although if a student finishes building her competition project before the allotted time has elapsed, she may work on her booklet during class. The paper/project needs to be on a topic that is relevant to the science competition project being constructed. Some suggestions for research topics are listed below. The booklet is due the Friday after the science competition on May 6th.

Possible Research Topics for Individual Projects:

1. **Glider:** 1) A description of aerodynamics or aeronautical engineering. 2) The evolution of flying machines. 3) The history and science of flight. 4) Research NASA missions.
2. **Egg Drop:** 1) Discuss the recycling process or specifically the recycling process of paper (what percentage of paper or other materials are recycled, what happens to recycled paper or other materials, etc.). 2) Discuss natural resources, what is a natural resource, how is it acquired, is there an unlimited supply? 3) Use of cotton and natural fibers vs. synthetic materials in clothing. Are there advantages or disadvantages to one or the other?
3. **Kite Building:** 1) Research and discuss different types of kite models. Are there advantages or disadvantages to specific designs? 2) How long have kites been around and what cultures were the earliest users? 3) Have kites been used for anything other than recreational purposes?

Lesson Study Research and Practice in Mathematics Education Lynn C. Hart, Alice S. Alston, Aki Murata, 2011-01-11 Lesson study is a professional development process that teachers engage in to systematically examine their practice with the goal of becoming more effective Originating in Japan lesson study has gained significant momentum in the mathematics education community in recent years As a process for professional development lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards benchmarks and nationally validated curricula While the body of knowledge about lesson study is growing it remains somewhat elusive and composed of discrete research endeavors As a new research area there is no coherent knowledge base yet This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work This book describes

several aspects of Lesson Study amongst others it gives an historical overview of the concept it addresses issues related to learning and teaching mathematics it looks at the role of the teacher in the process The last two sections of the book look at how lesson Study can be used with preservice mathematics teachers and at university mathematics methods teaching

Curriculum Leadership Development

Carol A. Mullen, 2012-11-12 Curriculum Leadership Development is an up to date user friendly textbook offering unique approaches to help readers understand the complexity of curriculum leadership. It is grounded in current and relevant theory, research, legislation and application in the closely related areas of curriculum leadership development and scholarship. The text solidifies the concepts of curriculum and leadership in experiential learning contexts and promotes democratic action and critical thinking. Author Carol A. Mullen uses a descriptive qualitative approach that integrates case study, data analysis, personal reflection and lessons learned. Among the most important elements of the book are the inclusion of the voice and curricular experiences of the professional student who is a seasoned teacher or beginning administrator, detailed illustrations of practitioners' experiences as curriculum makers and action researchers, an articulation of the links among curriculum development, constructivist curricula and mentoring scaffolds, and practical exercises to accompany case studies. Graduate and advanced undergraduate students in education will find this textbook of value in their coursework as will curriculum professionals who teach practicing teachers.
