foregrounding children's play and perspectives. It discusses the relation between teachers, children and mathematical content within the context of play with a particular focus on the framing of these relations within this context which is an important theme in the debate on whether teaching should be integrated with or separated from children's play. The work further addresses meaningfulness in the learning process particularly from the child's perspective. Globally most guidelines and curricula for early childhood education mention play as one of the key features for young children's learning. Still there are quite different views on the definitions of play and in what ways play should become part of children's learning. The chapters of the book mirror the research topics presented at the fifth POEM conference in May 2022 divided into four sub-themes: Play and learning, Children's perspectives on mathematics, Teachers' competencies and Theorizing aspects of early mathematics education.

Teaching Mathematics with Classroom Voting Kelly Slater Cline, Holly Zullo, 2012. Are you looking for new ways to engage your students? Classroom voting can be a powerful way to enliven your classroom by requiring all students to consider a question, discuss it with their peers and vote on the answer during class. When used in the right way, students engage more deeply with the material and have fun in the process while you get valuable feedback when you see how they voted. But what are the best strategies to integrate voting into your lesson plans? How do you teach the full curriculum while including these voting events? How do you find the right questions for your students? This collection includes papers from faculty at institutions across the country teaching a broad range of courses with classroom voting including college algebra, precalculus, calculus, statistics, linear algebra, differential equations and beyond. These faculty share their experiences and explain how they have used classroom voting to engage students, to provoke discussions and to improve how they teach mathematics. This volume should be of interest to anyone who wants to begin using classroom voting as well as people who are already using it but would like to know what others are doing. While the authors are primarily college-level faculty, many of the papers could also be of interest to high school mathematics teachers.
