Interactions on Digital Tablets in the Context of 3D Geometry Learning David Bertolo, 2016-07-14 Over the last few years multi touch mobile devices have become increasingly common However very few applications in the context of 3D geometry learning can be found in app stores Manipulating a 3D scene with a 2D device is the main difficulty of such applications Throughout this book the author focuses on allowing young students to manipulate observe and modify 3D scenes using new technologies brought

about by digital tablets Through a user centered approach the author proposes a grammar of interactions adapted to young learners and then evaluates acceptability ease of use and ease of learning of the interactions proposed Finally the author studies in situ the pedagogic benefits of the use of tablets with an app based on the suggested grammar The results show that students are able to manipulate observe and modify 3D scenes using an adapted set of interactions Moreover in the context of 3D geometry learning a significant contribution has been observed in two classes when students use such an application The approach here focuses on interactions with digital tablets to increase learning rather than on technology First defining which interactions allow pupils to realize tasks needed in the learning process then evaluating the impact of these interactions on the learning process This is the first time that both interactions and the learning process have been taken into account at the same time

Supporting Time-Critical, Parallel, and Spatially Distributed Tasks Using Augmented Reality Jannike Illing, 2025-05-15 Even in highly automated production environments some tasks such as bonding and assembly still rely on human adaptability These tasks are often time critical run in parallel and are spatially distributed across multiple workstations How can Augmented Reality AR help reduce complexity and support workers in managing these demanding processes In this dissertation manual manufacturing using bonding as a representative case is investigated and it is explored how AR can assist in the execution of complex parallel and time critical tasks Following a Human Centered Design HCD approach the research is grounded in observations and expert interviews leading to three central research questions How can time critical parallel tasks be visualized within the field of view FoV How can they be guided outside the FoV How can users gain an overview of distributed tasks Findings show that AR reduces task complexity improves performance and is preferred over traditional instructions However supporting more than two concurrent tasks increases cognitive load For spatially distributed tasks location based AR cues alone are not

sufficient additional peripheral visual signals and spatially registered overviews are essential for effective support
