

Series 20 Differential Pressure Switches

General Instructions

Explosion Proof

Weatherproof

These instructions provide information for installation, electrical connection, process connection and calibration of SOR® Series 20 Differential Pressure Switches.

Series 20 Differential Principle Basic construction is a Static "O" Ring diaphragm and piston pressure sensor. Process pressure acts on the diaphragm to produce force F_D against the piston. F_D is counteracted by two forces: F_L which comes from the Lo side Pressure port through the electrical housing, and F_S which comes from the adjustable range spring. Since the Lo-side process media pressurizes the electrical housing, Lo side process media is limited to clean, dry air or inert gas.
