### Student Exploration: Refraction

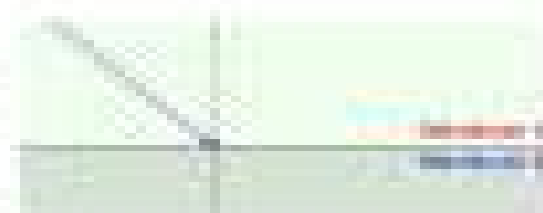

**Learning Goals:** Understand the relationship between the angle of incidence, angle of refraction, and the refractive index of a medium. Understand how light rays bend when they pass from one medium to another.

**Prerequisite Knowledge:** Students should have a basic understanding of light rays and how they travel in straight lines.

1. What would happen if a light ray traveled from air into water? Would it bend? If so, how would it bend?

2. How would the angle of refraction change if the light ray traveled from water into air? Would it bend? If so, how would it bend?

**Student Exploration:** Light rays travel in straight lines. When a light ray travels from one medium to another, it bends. This bending is called refraction. The amount of bending depends on the refractive index of the two media. The refractive index is a measure of how much a medium slows down light. Light travels faster in air than in water, so it bends towards the normal when it enters water.

**Teacher Resources:** This activity is suitable for students in grades 7-8.

3. A light ray travels from air into water. What happens to the ray?

4. What happens to the angle of the light ray?

5. What happens to the speed of the light ray?

**Conclusion:** Light rays bend when they pass from one medium to another.

6. A light ray travels from air into water. What happens to the ray? What happens to the angle of the light ray? What happens to the speed of the light ray?
