

CHLOROPHYLL METER **SPAD-502**

A lightweight handheld meter for measuring the chlorophyll content of leaves without causing damage to plants.

The SPAD-502 is a compact meter designed to help users improve crop quality and increase crop yield by providing an indication of the amount of chlorophyll present in plant leaves. The chlorophyll content of plant leaves is related to the

condition of the plant, and thus can be used to determine when additional fertilizer is necessary. By optimizing nutrient conditions, healthier plants can be grown, resulting in a larger crop yield of higher quality.

Features

Compact and lightweight for portability

The SPAD-502 is small enough to fit in a pocket and is extremely lightweight (only 225g) so it can be easily taken anywhere.

Quick, easy measurements

Measurements are taken by simply inserting a leaf and closing the measuring head. It is not necessary to cut the leaf, so the same leaf can be measured throughout the growing process.

Water-resistant

The SPAD-502 is water-resistant, so it can be used outside even in the rain.
*It is not immersible, and should not be cleaned with water.

Low power consumption

The SPAD-502 uses LED light sources, resulting in extremely low power consumption. One set of two AA-size alkaline-manganese batteries can provide approximately 20,000 measurements.

Small measuring area

The measuring area is only 2 × 3mm, allowing measurements of even small leaves. A sliding depth stop is included for accurate positioning of sample leaves.

High accuracy

High measuring accuracy (± 1.0 SPAD-unit for rice-plant leaves) allows close examination of growing conditions.

Data memory

The SPAD-502 has memory space for 30 measurements. Data in memory can be recalled or deleted at a later time, and the average value of all data in memory can be automatically calculated.

Reading checker

A reading checker enables users to check that the SPAD-502 is functioning correctly and providing accurate readings.

Plant Nutrition Manual J. Benton Jones, Jr.,1997-12-29 Like all living things plants require nutrient elements to grow The Plant Nutrition Manual describes the principles that determine how plants grow and discusses all the essential elements necessary for successful crop production The nutritional needs of plants that add color and variety to our visual senses are addressed as well Altogether nutritional requirements are given for 143 plants grouped in seven categories from food crop plants to ornamentals The text begins with an introduction to the basic principles of plant nutrition Chapters 2 and 3 describe the roles of the major elements and micronutrients The last two chapters describe techniques for determining the nutrient element status of growing plants through plant analysis and tissue tests The Plant Nutrition Manual is loaded with information on what plants need for normal vigorous growth and development free of nutritional stress

Plant Nutrition and Soil Fertility Manual, Second Edition J. Benton Jones, Jr.,2012-02-13 As soil and crop management procedures have become more complex County Agricultural Agents farm advisors consultants and fertilizer and chemical dealers have had to specialize in some aspect of soil fertility and crop nutrition management procedures limiting their ability to provide a range of advice and services Most farmers and growers can no longer turn to just one source for the information and instruction needed to achieve their production goals With over 70 percent new material the second edition of the Plant Nutrition and Soil Fertility Manual discusses the principles determining how plants grow and the elements essential for successful crop production with a focus on the principles of soil fertility and plant nutrition The book covers physical and chemical properties of soil chemical and organic fertilizers soil acidity and alkalinity liming and liming materials and micronutrients essential to plant growth It also describes elements toxic to plants soil testing and plant analysis The topics and discussion in this self contained book are practical and user friendly yet comprehensive enough to cover material presented in upper level soil and plant science courses It allows practitioners with general background knowledge to feel confident applying the principles presented to soil crop production systems

Tropical Forests Juan A. Blanco,Yueh-Hsin Lo,Shih-Chieh Chang,2016-11-09 Large regions of the planet have been transformed from their natural composition into different human made landscapes farmlands forest plantations pastures etc Such process called land use change is one of the major components of the current global change which has brought the planet into a new geological era the Anthropocene Land use change is particularly important in tropical forests as this

ecosystem type is still heavily affected by deforestation for timber extraction agricultural land creation of urban expansion Changing land use has important implications for the services that tropical forests provide production of goods such as timber food or water regulation of process such as nutrient cycling carbon sequestration local weather or climate extremes generating the framework for economic and cultural activity etc Therefore keeping ecosystem services when changing the use of the tropical lands is a major challenge in tropical regions This brief book by showcasing different research work done in tropical countries provides a first introduction on this topic discussing issues such as biodiversity loss changes in local weather or nutrient cycling patterns and economic activities around tropical forests and tools to detect and quantify the importance of land use change
