

Chapter 2

Atom Components and Subatomic Particles

There is an attractive force between the negatively charged electrons and the positively charged nucleus.

- The nucleus is smaller and contains most of the atom's mass.
- **Relationship between the energy of an orbital and its average radius: As the radius increases, the orbital energy increases.**
 - A small magnitude of E_n corresponds to a large denominator, which is n . So, if n is very large, then we are further from the nucleus: **A weakly held electron.**
 - As an electron gets farther from the nucleus, the principle quantum number (n) goes up and the energy increases and the electron is less stable.

Atomic Orbital Function Graphs

ψ = wavefunction

$|\psi^2|$ = probability density

- Likelihood of locating the electron in a given region of space.
 - Form: $y = \sin(x)$

Wavefunction describes orbitals

Determining an Orbital

N: Principle quantum number (shell)

- $N = 1, 2, 3, \dots$
- **Determines the distance of an electron from the nucleus**
- All orbitals with the same n (in the same atom) are the same distance from the nucleus on average.

L: Angular momentum quantum number (subshell)

- $L = 0, 1, 2, \dots, (n-1)$
- **Determines the overall shape**
- All orbitals in the same atom w/ the same n and l have the same angular momentum (describes shape)

Many-Particle Physics Gerald D. Mahan, 2012-12-06 This textbook is for a course in advanced solid state theory It is aimed at graduate students in their third or fourth year of study who wish to learn the advanced techniques of solid state theoretical physics The method of Green's functions is introduced at the beginning and used throughout Indeed it could be considered a book on practical applications of Green's functions although I prefer to call it a book on physics The method of Green's functions has been used by many theorists to derive equations which when solved provide an accurate numerical description of many processes in solids and quantum fluids In this book I attempt to summarize many of these theories in order to show how Green's functions are used to solve real problems My goal in writing each section is to describe

calculations which can be compared with experiments and to provide these comparisons whenever available The student is expected to have a background in quantum mechanics at the level acquired from a graduate course using the textbook by either L I Schiff A S Davydov or I Landau and E M Lifshitz Similarly a prior course in solid state physics is expected since the reader is assumed to know concepts such as Brillouin zones and energy band theory Each chapter has problems which are an important part of the lesson the problems often provide physical insights which are not in the text Sometimes the answers to the problems are provided but usually not

Quantum Field Theory Lewis H. Ryder,1996-06-06 This book is a modern pedagogic introduction to the ideas and techniques of quantum field theory After a brief overview of particle physics and a survey of relativistic wave equations and Lagrangian methods the quantum theory of scalar and spinor fields and then of gauge fields is developed The emphasis throughout is on functional methods which have played a large part in modern field theory The book concludes with a brief survey of topological objects in field theory and new to this edition a chapter devoted to supersymmetry

Techniques for Nuclear and Particle Physics Experiments William R. Leo,2012-12-06 Not quite six years have passed since the appearance of the first edition of this book This is not a long period Yet the rapid pace of scientific and technological development today is such that any book on experimental technique must be wary of becoming obsolete in some way or another even in such a short span of time Thus when the publisher Springer Verlag informed me of the need for a new printing of this book I decided it was an opportune moment to update some of the chapters as well as to include some new material The result is this second edition The most

notable changes have been in Chapters 2 and 3 In the latter which concerns radiation protection most of the sections have been rewritten to take into account the new recommendations from the International Commission on Radiation Protection the most important of which are the new dose limits for exposure to ionizing radiation In addition emphasis has now been put on the use of SI units in dosimetry i.e the Gray and Sievert which have now become standard
