Subcellular Fractionation A Laboratory Manual:

Subcellular Fractionation Paul R. Pryor, 2015 Eukaryotic cells are remarkably complex structures containing a vast repertoire of macromolecules organelles and other compartments that orchestrate the tasks required for life For in depth studies of their function and composition reliable methods for the isolation of specific subcellular structures are often required This laboratory manual provides step by step protocols for the extraction of subcellular components from animal tissues yeasts plants and cultured cells Each chapter focuses on a particular eukaryotic organelle vesicle membrane or macromolecular complex Strategies for breaking cells while maintaining the structural and functional integrity of the component of interest enriching for that component based on its physical and biochemical characteristics and monitoring and ensuring the success of the purification procedure are provided The contributors describe both traditional approaches e g density gradient centrifugation and innovative techniques e g the use of SPIONs for isolating subcellular constituents This manual is therefore an essential laboratory resource for all cell biologists seeking a comprehensive collection of dependable subcellular fractionation methods

Subcellular Fractionation John M. Graham, David Rickwood, 1997 Many investigations into the structure and function of cells and tissues require the isolation of a particular membrane or subcellular component organelle This book covers all the necessary aspects from breaking up the cells homogenization via a variety of separation techniques the isolation and fractionation chapters to characterization of the separated organelles

Structural Elements of the Nervous System Abel Lajtha, 2013-03-09 Neurochemistry having the objective of elucidating biochemical processes subserving nervous activity emerged as an application of chemistry to the of neurobiological problems as a post World War II phenomenon investigation However only in the last 40 years has the chemical community recognized neurochemistry as a distinct if hybrid discipline During this period great strides have been made However recently neurochemistry along with neurophysiology neuropharmacology neuroanatomy and the behavioral sciences has emerged to form neuroscience a new community of scientists with its own national society journals and meetings Actually this recently formed hybrid neuroscience is in the process of merging with another well established discipline molecular genetics frequently called molecular biology and itself a hybrid which appears to have sufficient hybrid vigor to form yet a new community of scientists which for want of a more imaginative term has been called molecular genetic neuroscience Clearly advantages resulting from such mergers or hybridizations accrue not only from the merging discipline neurochemistry in this case to the new community molecular genetic neuroscience but also in the reverse direction This Foreword will be concerned primarily with examples of this latter process
