Techniques statistiques Bernard Grais, 2000. L'ambition de cet ouvrage est de donner sous une forme pratique et sans recours excessif à l'appareil mathématique un exposé clair des techniques statistiques qui sont aujourd'hui indispensables à l'étudiant au responsable ou cadre d'entreprise. Le présent volume Statistique descriptive aborde de façon claire et précise les méthodes fondamentales essentiellement descriptives qui suffisent le plus souvent pour interpréter les données disponibles et clarifier la prise de décision, le classement et le traitement des données. Les représentations graphiques les plus riches des observations, l'utilisation des indices statistiques. Largement illustré d'exemples concrets et expliqués, il constitue un outil dont l'aspect concret ne chappera pas à ceux qui s'intéressent surtout aux principes, aux résultats et aux applications. Statistique descriptive est suivi du volume de Méthodes statistiques consacrées aux instruments d'analyse statistique complétés dans la même collection par les Exercices de statistique descriptive avec rappels de cours.

Statistique descriptive Luc Albarello, Etienne Bourgeois, Jean-Luc Guyot, 2003. Cet ouvrage propose les outils principaux de la statistique descriptive pour résoudre des questions très concrètes telles que : Comment construire ou interpréter de manière critique des tableaux de données ou des graphiques ? Comment travailler avec des proportions, ratios, pourcentages, etc. avec des mesures de variation : nombres, indices de tendance centrale (moyenne, mode) et de dispersion (variance, espace interquartile) ? Comment donner du sens aux chiffres ? S'adressant en priorité des praticiens occasionnellement ou régulièrement amenés dans leur vie quotidienne à produire ou interpréter des données statistiques sans avoir aucune expertise particulière préalable dans le domaine, l'ouvrage a trait tout d'abord à une perspective d'auto-apprentissage. Écrit dans un langage clair et accessible, il abonde en exemples concrets et exercices corrigés, principalement dans le champ économique, politique, social ou éducatif. Il intéressera les professionnels dans les domaines des sciences sociales, de l'éducation et de la santé, mais aussi les professeurs et les étudiants des 1^{er} et 2^e cycles en sciences humaines.
