Exploration is mankind s imperative Since the beginnings of civilization men and women have not been content to build a wall around their settlements and stay within its con nes They explored the land around them climbed the mountains and scanned the horizons The boldest among them pushed exploration to the most distant frontiers of the planet As a result much of the Earth was inhabited well before the days of the renowned European th th plorers of the 15 and 16 centuries

Exploration did not cease after the circumnavigation of the globe it continued to the present Today explorers are going in new directions not just east and west north and south They explore backward in time and upward in space Arc ology explores the shorter time scales and geochemistry the longer time scales of geophysical events asteroidal and cometary collisions magnetic reversals continental formation and more However on Earth we cannot go back indefinitely for much of the evidence of the very earliest days has been lost
