**JAA/ATPL Theoretical Training Manuals** Joint Aviation Authorities, 2004      CAE Oxford Aviation Academy - JAA ATPL - Air Law , This text book has been written and published as a reference work to assist students enrolled on an approved EASA Air Transport Pilot Licence ATPL course to prepare themselves for the EASA ATPL theoretical knowledge examinations Nothing in the content of this book is to be interpreted as constituting instruction or advice relating to practical flying

**Oxford EASA ATPL Manual Volume 1 Air Law** , 2014      **CAE OXFORD AVIATION ACADEMY - OPERATIONAL PROCEDURES** ,      *Air Navigation* Octavian Thor Pleter, 2024-04-22 This book takes a new approach to air navigation extending the classic scope of positioning and guidance to efficient and safe 4D flight trajectory management Modern air navigation aims at flight trajectories optimisation There is an infinite number of solutions to the classic navigation problem of flying from one airport to another but most of them are wasteful of resources and even risky Minimising all costs and risks incurred by the 4D flight trajectory makes air navigation both efficient and safe which are key factors in air navigation services Beyond minimising fuel burn and CO2 efficiency addresses non CO2 emissions and noise This is a visually intensive book using examples and case studies to illustrate the concepts the physics of navigation and the mathematical models involved Numerical examples reflect its problem solving nature It is useful to aerospace students engineers pilots air traffic controllers technicians and scientists curious about aviation      *Glider Flight Instructor Manual* Francesco Daniele Padovano, 2022-09-16 For decades and in the interests of greater flight safety Competence criteria have been introduced in professional training The results obtained in professional aviation are indisputable and the proposed new paradigm aims to increase the pilot's ability to resolve in particular unfamiliar situations There is no doubt that during soaring the conditions faced are as a general rule highly variable which requires the pilot to be highly adaptable However even though this flying technique is the one that requires the most resilience there is no single criterion in the development of training that would lead the future pilot to develop the necessary skills nor is there a single evaluation criterion that would determine a common standard From my experience in professional teaching in organisations such as CAE the experience as an EASA inspector and my own experience as a gliding instructor I wanted to propose a new way of teaching and above all of assessing a future glider pilot with COMPETENCE criteria in which the elements of CRM and TEM are always present together with the application of KSA In this text I hope that gliding instructors will find a tool for teaching their classes and a greater standardisation as a guide to develop their own Competence Based Training and assessment adapted at the local conditions and gliders The future is not white or black but an infinite scale of greys where different solution could be proposed successfully By this the list of mission proposed is my personal view adapted to my programs but it not pretends to be an absolute criterion Hope you will enjoy Happy landings Francesco Padovano      Aircraft Performance Weight and Balance Thiago Lopes Brenner, 2021-05-15 This book covers the physics of flight basic jet engine propulsion principles and

regulations of aircraft performance and other related topics always with an innovative and simple approach to piloting and flight planning This way a traditionally complex study was made into something fun and easy The book is focused on class A aircraft performance and is suitable for those who are unfamiliar with airplane performance as well as for those with some previous background or experience who want to gain a more in depth understanding of the subject matter To sum up pilots professionals and students flight dispatchers aeronautical engineers and aviation enthusiasts Happy reading *New Trends in Civil Aviation* Vladimir Socha, Lenka Hanáková, Andrej Lališ, 2018-06-27

The NTCA conference series is dedicated to publishing peer reviewed proceedings of the conference The goal is to disseminate state of the art scientific results available in the domain of civil aviation These proceedings contain a collection of scientific contributions to the NTCA 2017 conference which took place in Prague from 7-8 December 2017 and was hosted by the Department of Air Transport Czech Technical University in Prague with the cooperation of the Faculty of Aeronautics Technical University of Košice Institute of Aerospace Engineering Brno University of Technology Air Transport Department University of Ilina and the Czech Aerospace Society The NTCA conference aims to build and extend a platform for interaction between communities interested in aviation problems and applications NTCA 2017 followed this established practice and provided room for discussing and sharing views on the current issues in the field of aviation As a result these proceedings include contributions on air transport operations air traffic management and economic aspects aviation safety and security aircraft technologies unmanned aerial systems human factors and ergonomics in aviation

**JAA ATPL PRINCIPLES FLIGHT OXFORD , CAE OXFORD AVIATION ACADEMY - FLIGHT PERFORMANCE AND PLANNING II , Flight Performance & Planning ,2004 Advanced Approach Light System** Behrend, Ferdinand, 2017-08-25

The constant growth in aviation requires the introduction of new technologies in order to meet the demand for increasing capacity Especially the airport often represents the limiting factor Poor visibility conditions and an insufficiently equipped ground infrastructure regarding navigation facilities can lead to restrictions in maintaining the prevailing traffic flow especially during the approaches The conventional instrument landing system consists of numerous technical components which are causing expenses regarding maintenance and operation Smaller airports are often only partially or not at all equipped with the appropriate ground facilities This can bring air traffic to a total halt during certain visibility conditions New satellite based approach procedures offer the possibility to keep up air traffic even during poor visibility conditions regardless of the ground infrastructure required in the past These also offer now a barometric guidance or an augmented satellite signal for the vertical flight guidance component With the use of these approach procedures there is however the possibility of new faults and errors of the vertical flight guidance signal In a system based on electromagnetic radio waves a fault is angular meaning if the airplane gets nearer to the transmitter on ground the absolute possible failure of the target approach path gets smaller In a satellite based approach on the other hand it is constant during the whole approach The result can be a great deviation from the target approach path even just before

reaching the runway threshold. Often only after reaching the decision height and the herewith connected visual contact to corresponding ground features these faults can be recognized during poor visibility conditions close to the minima of a precision approach flight. The larger the absolute error to the target approach path the more crucial it gets to initiate a missed approach procedure and therefore preventing a drop out of the relevant obstacle clearance limit. Research has shown that through the currently present visual characteristics of the approach lighting system the actual position cannot be determined sufficiently regarding the runway threshold and the target approach path in order to estimate the decision height correctly. The here presented Advanced Approach Light System is supposed to be an additional visual aid in order to support the cockpit crew in its decisions. Therefore it should amount to improve the awareness of the situation regarding constant vertical faults. The new navigation lighting system has been integrated into a flight simulator and was tested by licensed airline pilots within two test series with varying visibility conditions and decision heights. Next to basic functionality operational usability in existing procedures of practical routines in the cockpit has been evaluated. The results of the test series have demonstrated a significant improvement in identifying vertical faults with the support of the Advanced Approach Light System. The decision to initiate a missed approach was made immediate and prompt and therefore the airplane stayed within the obstacle clearance limit even in a low decision height. In contrast the trial participants without the new system took reluctant and often far too late decisions which lead to a drop out of the obstacle clearance limit. The Advanced Approach Lighting System has significantly improved the situation awareness for pilots in command in recognizing vertical faults when reaching the decision height. The integration in existing work routines and its operative use happened flawlessly and was highly accepted by the trial participants.

Das stetige Wachstum in der Luftfahrt erfordert die Einführung neuer Technologien um der Nachfrage nach steigender Kapazität gerecht zu werden. Insbesondere das System Flughafen stellt hierbei oftmals den limitierenden Faktor dar. Schlechte Sichtbedingungen und die unzureichende bodenseitige Ausrichtung mit Navigationseinrichtungen können für Einschränkungen in der Aufrechterhaltung des bestehenden Verkehrsflusses sorgen insbesondere bei Landeanflügen. Das konventionelle Instrumentenlandesystem besteht aus einer Vielzahl an technischer Komponenten die hohen Aufwand hinsichtlich Wartung und Betrieb verursachen. Kleine Flughäfen sind oft nur teilweise oder gar nicht mit den entsprechenden BodenkompONENTEN ausgerüstet so dass der Flugbetrieb bei bestimmten Sichtbedingungen vollständig eingestellt werden muss. Neue satellitengestützte Anflugverfahren bieten die Möglichkeit den Flugbetrieb auch bei schlechten Sichtbedingungen aufrechtzuerhalten unabhängig von der bisher notwendigen Bodeninfrastruktur. Diese bieten mittlerweile ebenso eine auf der barometrischen Höhenmessung oder einem aufgewerteten Satellitensignal basierende vertikale Flugführungskomponente. Allerdings besteht mit der Verwendung entsprechender Anflugverfahren auch eine neue mögliche Fehlercharakteristik des vertikalen Flugführungssignals. Ist ein Fehler beim auf elektromagnetischen Funkwellen basierenden Instrumentenlandesystem winkelförmig dann je näher sich das Luftfahrzeug dem Sender am Boden nähert umso

kleiner wird die absolute Ablage zum Sollanflugweg ist dieser bei satellitengestützten Anflügen konstant über den gesamten Endanflug. Eine große Abweichung vom Sollanflugweg auch kurz vor Erreichen der Landebahnschwelle kann die Folge sein. Bei schlechten Sichtbedingungen nahe den Minima eines Präzisionsanfluges kann der Fehler oft erst bei Erreichen der Entscheidungshöhe und dem damit verbundenen visuellen Kontakt zu entsprechenden Bodenmerkmalen erkannt werden. Je größer die Ablage zum Sollanflugweg umso entscheidender ist das unverzügliche Einleiten des Fehlanflugs um ein Verlassen der entsprechenden Hindernisfreibereiche zu verhindern. Untersuchungen haben gezeigt, dass die aktuell vorhandenen visuellen Merkmale der Anflugbefeuerung nicht ausreichend sein können, die tatsächliche Position bezüglich der Landebahnschwelle und des Sollanflugweges bei Erreichen der Entscheidungshöhe einzuschätzen. Das hier vorgestellte Advanced Approach Light System soll die Cockpitbesatzung als zusätzliches visuelles Merkmal bei der Entscheidung unterstützen und so zur Verbesserung des Situationsbewusstseins hinsichtlich konstanter vertikaler Fehler beitragen. Das neue Befeuerungssystem wurde in einen Flugsimulator integriert und innerhalb zweier Versuchsreihen mit unterschiedlichen Sichtbedingungen und Entscheidungshöhen von lizenzierten Verkehrspiloten getestet. Dabei sollte neben der grundsätzlichen Funktionalität auch die operative Einsetzbarkeit in den bestehenden Ablauf der Handlungsrouinen im Cockpit untersucht werden. Die Ergebnisse der Versuchsreihen haben eine erhebliche Verbesserung im Erkennen vertikaler Fehler mit Hilfe des Advanced Approach Light System aufgezeigt. Die Entscheidung zum Einleiten des Fehlanflugs erfolgte direkt und unverzüglich, wodurch das Luftfahrzeug auch bei sehr niedriger Entscheidungshöhe noch innerhalb des Hindernisfreibereiches blieb. Im Gegensatz dazu wurde bei den Versuchsteilnehmern, denen nicht das neue System zur Verfügung stand, die Entscheidung eher zögerlich und oftmals viel zu spät getroffen, was zu einem Verlassen des Hindernisfreibereichs führte. Das Situationsbewusstsein der Luftfahrzeugführer zum Erkennen vertikaler Fehler beim Erreichen der Entscheidungshöhe wurde durch das Advanced Approach Light System wesentlich erhöht. Die Integration in bestehende Arbeitsrouinen und der operative Einsatz erfolgten bei hoher Akzeptanz problemlos durch die Versuchsteilnehmer.
