**Opportunity to Learn, Curriculum Alignment and Test Preparation** Jaap Scheerens, 2016-08-30 This book provides a review of the effectiveness of Opportunity to Learn OTL operationalized as the association between OTL and student achievement In addition it presents an elaborate conceptual map in which OTL is regarded as part of a larger concept of curriculum alignment Major

components of this framework are national goals and standards school curricula formative tests textbooks actual delivery of content as part of teaching and summative tests and examinations Alignment between educational goals intended and implemented curricula and educational outcomes is considered an important prerequisite for effective education The expectation is that better alignment leads to better student performance The concept of OTL is commonly used to compare content covered as part of the implemented curriculum with student achievement As such it is to be seen as a facet of the broader concept of alignment As it comes to enhancing OTL in educational policy and practice proactive curriculum development is compared to a more retroactive orientation Legitimate forms of test and examination preparation belong to this retroactive orientation and are seen as favorable conditions for optimizing OTL This book reviews the research evidence on the effects of OTL on student achievement by means of detailed descriptions of key empirical studies a review of meta analyses a vote count syntheses of 51 empirical studies conducted between 1995 and 2015 and a secondary analysis based on TIMSS 2011 and PISA 2012 data It concludes that the effect size of OTL at about 30 is modest but comparable in size to other effectiveness enhancing conditions in schooling The final chapter of the book provides suggestions for educational policy and practice to further optimize OTL div

*Basic Statistics* A. Maxwell,2012-12-06 For many years now I have been required to give a series of elementary lectures on statistics to medical students about to undertake a postgraduate course in psychiatry The declared aim of the course for which very limited time was available was to provide the students with some initial understanding of the statistical terminology and elementary techniques to which other teachers in particular psychologists and sociologists would be likely to refer in the course of their lectures The task was tricky for two reasons In the first place most of the students involved despite their best intentions had forgotten their school mathematics and secondly no textbook existed at the right level of difficulty which contained examples appropriate to these students needs and experience The present book was written to fill the gap Though pri marily intended for psychiatrists the book should prove very useful to any student of the behavioural sciences who wants a simple introductory course on the principles of experimental design and data analysis It must be one of the simplest text books on elementary statistics ever written I am indebted to the literary executor of the late Sir Ronald A Fisher F R S to Dr Frank Yates F R S and to Oliver Boyd Ltd for permission to reprint Tables 3 and 5 from their book Statistical Tables for Biological Agricultural and Medical Research

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05

Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing

Alternatively it will be good to test whether math interventions will improve reading

*Mathematical Models of Perception and Cognition Volume II* Joseph Houpt, Leslie M. Blaha, 2016-05-20 In this two volume festschrift contributors explore the theoretical developments Volume I and applications Volume II in traditional cognitive psychology domains and model other areas of human performance that benefit from rigorous mathematical approaches It brings together former classmates students and colleagues of Dr James T Townsend a pioneering researcher in the field since the early 1960s to provide a current overview of mathematical modeling in psychology Townsend s research critically emphasized a need for rigor in the practice of cognitive modeling and for providing mathematical definition and structure to ill defined psychological topics The research captured demonstrates how the interplay of theory and application bridged by rigorous mathematics can move cognitive modeling forward

*Clinical Psychometrics: Old Issues and New Perspectives* Michela Balsamo, Marco Innamorati, Dorian A. Lamis, 2019-09-20 Clinical Psychometrics can be defined as a discipline that deals with the definition and measurement of clinical constructs Among its interests it includes dimensions such as skills behavior psychopathology quality of life and personality Indeed this discipline focuses on individual differences the theory of measurement the construction of measure instruments and their application in an international context Clinical Psychometrics can be considered as an essential tool in many fields of research related to psychological and psychiatric interventions for example it is useful for diagnostic assessment in various fields including clinical and forensic areas for the design and evaluation of specific psychological and pharmacological treatments Therefore Clinical Psychometrics is an applied discipline using psychometric tools to develop evidence based type procedures relating to the understanding and improvement of the psychological conditions of individuals This Research Topic on Clinical Psychometrics is interested in several aspects of measurement of psychological variables focusing on the two fundamental paradigmatic aspects of the discipline the Classical Test Theory and the Item Response Theory This Research Topic seeks to stimulate a scientific debate between psychotherapists and psychometricians in this area It could have applicative fallouts such as designing trans cultural studies in order to

- 1 investigate the invariance of new instruments for measuring clinical variables
- 2 test the invariance of existing instruments used in clinical research
- 3 develop more refined measure instruments

for the evaluation of clinical dimensions similarly to work conducted by the Obsessive Compulsive Cognitions Working Group in identifying domains considered central to OCD and developing the 87 item Obsessive Beliefs Questionnaire 4 evaluate therapeutic outcomes and processes such as states stress psychological distress psychological adjustment to illness health related quality of life mood disorders sexual functioning etc The goal of this Research Topic is to disseminate a culture of integration between psychometric model and clinical model promoting the scientific debate about the deepening of the existing methods and or the proposal of new methods capable of combining clinical significance with quantitative rigor This Research Topic welcomed all types of articles with the exception of case reports We were particularly interested in 1 Systematic reviews shedding new lights on the psychometric properties of the most used psychological measures in clinical psychology neuroscience psychiatry psychosomatics etc 2 Guidelines and suggestions on the correct use and gold standards in psychological assessment in the form of research studies and brief reports on the development of new measures and adaptation of existing ones      *Forthcoming Books* Rose Arny,2003
