Sellares, 2015-01-29. L'objectiu del Manual de practiques de Microbiologia I i II és que l'alumne conegui el funcionament d'un laboratori de microbiologia i s'iniciï en les tècniques microbiològiques bàsiques. Aquest manual conté informació per a la preparació de material i mètodes de cultiu i per a l'esterilització i observació microscòpica dels bacteris i fongs. Inclou els protocols experimentals per al recompte i la identificació de bacteris aeròbics i anaeròbics estrictes. Així mateix presenta una pràctica en la qual es construeix un arbre filogenètic a partir de seqüències del gen 16S rRNA obtingudes de les bases de dades. La cinètica del creixement bacterià se segueix al laboratori i a l'aula d'informàtica i també s'observa l'efecte dels bacteriòfags sobre un creixement confluent de bacteris. El contingut d'aquest manual constitueix una eina bàsica per a la pràctica de la microbiologia en general i per al treball posterior en altres àrees relacionades.

Prevalence, Transmission and Control of Clinically Important Antimicrobial-Resistant Bacteria/Genes within One Health Framework Qixia Luo,Thava Palanisami,Biao Tang,Yuyi Yang,Ximin Zeng,Zhi Ruan, Antimicrobial resistance AMR has emerged as a major public health issue attracting increased attention from governments and researchers The spread and transmission of antimicrobial resistant bacteria genes is not only a clinical problem but also poses unprecedented challenges in the animal husbandry industry and is closely linked to the environment The clinically important antimicrobial resistant bacteria and their AMR genes such as carbapenemase producing Gram negative Bacilli with blaNDM blaKPC blaIMP blaVIM genes colistin resistant Gram negative bacteria with mcr genes methicillin resistant Staphylococcus aureus with mec genes vancomycin resistant Enterococcus with van genes and tigecycline resistant bacteria with tet X genes have been detected not only in health care facilities but also in farms and environments The concept of One Health emphasizes the

interconnectedness of human animal and ecosystem health with antimicrobial resistant bacteria genes occupying a unique position in close contact with all aspects Given the critical and interdependent nature of AMR in public health animals and the environment it is logical and necessary to take a One Health approach to address this issue Clinically important antimicrobial resistant bacteria and genes have been reported and shown to be disseminated in humans animals and the environment over the last few decades The majority of these studies however only described resistant bacteria or genes from a single source and region with no systematic or global conceptualization The research on the transmission of AMR bacteria genes has been limited and insufficient A growing number of AMR related proposals and policies have emerged but few AMR control policy studies have been reported due to a lack of understanding of each participant s perspectives values and goals In this context studies on the prevalence transmission and control of clinically important AMR within the One Health framework are in line with demand
