operating instructions

STARTING THE ENGINE

If weather or engine is warm, switch on and cranks the engine stop control is in the "run" position. Adjust accelerator to the fully open position and engage the starter motor by turning the starter motor switch in a clockwise direction to the "start" position (see Fig. 2).

As soon as the engine starts, release the starter switch to the "off" position.

Always be sure that the starter pinion and flywheel have stopped rotating before reengaging the starter motor; otherwise the ring or pinion may be damaged.

TO STOP THE ENGINE

A spring loaded stop control is located near the normal engine controls and functions by cutting off the fuel at the fuel injection pump.

To operate, pull the knob and hold in this position until the engine comes to a stop. Ensure that the control returns to the "run" position; otherwise difficulty may be experienced in restarting the engine.

COLD STARTING

Switch on, cranking the engine stop control is in the "run" position.

Turn on the fuel supply tap of the cold starting aid (never release flap).

Turn the starter switch to the "start" position and hold it there for 10 seconds to twenty seconds.

With the accelerator in the fully open position, turn the starter switch to the "stop" and "start" position, thereby engaging the starter motor.
