Review Oxidation-Reduction (redox) reactions, assigning oxidation numbers.

****LEO goes GER**

e⁻ transferred from Fe to H⁺

Oxidizing agent (oxidant) = e⁻ taker (gets reduced)

Reducing agent (reductant) = e⁻ giver (gets oxidized)

Half Reactions

Balancing equations by the half reaction method.

Often, all of the ions present at the beginning of a redox will not be represented, due to the fact that they are spectators and are not important to the redox process.

Also, redox rxns may be accompanied by the terms "in acid solution or acidic environment" or "in base or basic environment."

➤ If acid, use H⁺ and H₂O to balance the equation.

➤ If base, use OH⁻ and H₂O to balance the equation.

Acidic env. $\text{MnO}_4^-(\text{aq}) + \text{C}_2\text{O}_4^{2-}(\text{aq}) \rightarrow \text{Mn}^{2+}(\text{aq}) + \text{CO}_2(\text{g})$

Step 1: Write basic half reactions.

Step 2: Each half rxn is balanced with respect to the

a. elements oxidized and reduced and

b. other atoms

c. charge

Reduction: $8\text{H}^+ + \text{MnO}_4^- \rightarrow \text{Mn}^{2+} + 4\text{H}_2\text{O}$ (atoms now balance

net chg +7

net chg +2 using H⁺ and H₂O)

The e⁻ change is 5.

So: $5e^- + 8\text{H}^+ + \text{MnO}_4^- \rightarrow \text{Mn}^{2+} + 4\text{H}_2\text{O}$

Oxidation: $\text{C}_2\text{O}_4^{2-} \rightarrow 2\text{CO}_2$ (atoms balance)

net chg -2

net chg 0

The e⁻ change is 2.

So: $\text{C}_2\text{O}_4^{2-} \rightarrow 2\text{CO}_2 + 2e^-$

Step 3: Balance e⁻ in the 2 half rxns by multiplying by correct values to give a common factor.

e⁻ lost must = e⁻ gained.

Melendres,2012-12-06 Electrochemistry is one of the oldest branches of Physical Chemistry Having its foundations in the work of Faraday Arrhenius and others it evolved from the study of transport in electrolyte solutions to that of electrode

kinetics Kinetic methods are inherently unable to identify unequivocally the species involved in a reaction Therefore beginning in the 70s many spectroscopic and diffraction techniques were applied to the study of the electrode electrolyte interface in order to identify intermediary reaction species and even the spatial arrangement of atoms or molecules at the interface In order to disseminate these techniques a NATO Advanced Study Institute was held at Puerto de la Cruz Tenerife Canary Islands Spain from July 2 to 15 1988 The Institute consisted of tutorial type lectures poster sessions and round table discussions It was attended by over 65 participants from NATO member countries and others from Argentina and Japan In the present volume most of the lectures presented at the Institute have been collected At least one chapter is devoted to each technique Emphasis has been made on case studies rather than theory which can be found in textbooks and other publications Our purpose in this book is to help the electrochemists uninitiated in spectroscopic methods to decide which techniques would be suitable for application to their particular problems We thank all the lecturers who contributed to this volume and even those UHPs Unrepentant Habitual Procrastinators who did not in spite of our urgings to do so

Tzanavaras, Constantinos K. Zacharis, 2010 Reviews in Pharmaceutical and Biomedical Analysis contains coverage and review of new trends and applications in all areas of pharmaceutical biomedical and analytical chemistry Authors have contributed review articles according to their expertise on various topics Modelling and Numerical Simulations II Mordechai Schlesinger, 2009-08-15 The present volume is the second in a two volume set dealing with modelling and numerical simulations in electrochemistry Emphasis is placed on the aspect of nanoelectrochemical issues It seems appropriate at this juncture to mention the n growing body of opinion in some circles that George Box was right when he stated three decades ago that All models are wrong but some are useful Actually when the statement itself was made it would have been more appropriate to say that All models are inaccurate but most are useful nonetheless At present however the statement as it was made is far more appropriate and closer to the facts than ever before Currently we are in the midst of the age of massively abundant data Today's philosophy seems to be that we do not need to know why one piece of information is better than another except through the statistics of incoming and outgoing links between information and this is good enough It is why both in principle and in practice one can translate between two languages without knowledge of either While none of this can be ignored and it may even be true that All models are wrong and increasingly you can succeed without them the traditional approach of scientific modelling is still the order of the day That approach may be stated as hypothesize measure model test It is in this light that the present volume should be viewed
