[Photoenergy and Thin Film](#)

[Materials](#) Xiao-Yu Yang, 2019-03-19 This book provides the latest research developments and future trends in photoenergy and thin film materials, two important areas that have the potential to spearhead the future of the industry. Photoenergy materials are expected to be a next generation class of materials to provide secure, safe, sustainable, and affordable energy. Photoenergy devices are known to convert the sunlight into electricity. These types of devices are simple in design with a major advantage as they are stand alone systems able to provide megawatts of power. They have been applied as a power source for solar home systems, remote buildings, water pumping, megawatt scale power plants, satellites, communications, and space vehicles. With such a list of enormous applications, the demand for photoenergy devices is growing every year. On the other hand, thin films, coating, which can be defined as the barriers of surface science, the fields of materials science, and applied physics, are progressing as a unified discipline of scientific industry. A thin film can be termed as a very fine or thin layer of material coated on a particular surface that can be in the range of a nanometer in thickness to several micrometers in size. Thin films are applied in numerous areas ranging from protection purposes to electronic semiconductor devices. The 16 chapters in this volume, all written by subject matter experts, demonstrate the claim that both photoenergy and thin film materials have the potential to be the future of industry. **The Urban Ecologies of Divided Cities** Amira Osman, John Nagle, Sabyasachi Tripathi, 2023-06-12

The book discusses how division affects the fabric of cities and people's sense of identity and agency, and are reflected in physical features, architecture, and urban planning. The question of divided cities represents a complex and multistranded urban ecology at once both social and spatial; it cannot be limited to a single science or discipline such as social or spatial fields. This suggests integrated and cross disciplinary understandings, as well as integrated or parallel approaches and solutions. Urban ecologies of division manifest in multiple forms. One of their most palpable expressions is conflict with parallels around the world, and often with correlations in the spatial fabric. Violence in such contexts is often a surface expression of deeper socio-economic or ideological differences. Whether as a result of intervention by authority or by dissent between groups, a divided city inevitably becomes a place of conflict in various forms.

and intensity eroding the joy of living and sense of collective belonging to the detriment of all In effect it erodes the collective advantage of being part of a more unified society A city exists in collections of social structures which mutually form a society A divided city implies divided social structures and in consequence a divided society The papers compiled in this book present many case studies of divided cities discussing the different causes of divisions and their effects on societies Some of the causes can be linked to conflicts wars colonialism or legislative political systems In response to the serious challenges resulting from these divisions the book aims to provide opportunities for new approaches and possibilities for new interventions and solutions making it significant to urban planners architects and policymakers **Polymer**

Youth and Popular Culture in Africa Paul Ugor, 2021 The edited collection focuses on the links between young people and African popular culture It explores popular culture produced and consumed by young people in contemporary Africa And by culture we mean all kinds of texts or representations visual oral written performative fictional social and virtual created by African youth mostly about their lives and their immediate societies and for themselves but also consumed by the larger public and shared locally and globally We proceed from the premise that cultural texts not only function as social facts as Karin Barber argues but that they double as commentaries upon and interpretations of social facts They are part of social reality but they also take up an

attitude to social reality 2007 04 So the work focuses specifically on what African youth produce as popular culture under what conditions or contexts they produce such work how they produce those texts why they produce them the aesthetic dimensions of these texts as cultural artifacts and why these textual practices matter as social facts as interpretive acts and as cultural symbols of the general cultural activism of young people in a rapidly changing world a world where the global cultural economy is the prime terrain for the relentless struggles over the meanings that come to shape political economic and social systems
