Recarbonizing global soils - A technical manual of recommended management practices

Food and Agriculture Organization of the United Nations,Intergovernmental Technical Panel on Soils,2021-09-07 During the last decades soil organic carbon SOC attracted the attention of a much wider array of specialists

beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals in particular Goal 15. Protect, restore and promote sustainable use of terrestrial ecosystems sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments including the advantages, drawbacks and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 2 includes a description of hot spots of SOC stocks. This manual defines hot spots of SOC as areas that represent a proportionally little of the global land surface but on which SOC storage is highly effective, bright spots as large land areas with low SOC stocks per km² that represent a potential for further carbon sequestration.

Causal Inference in Econometrics Van-Nam Huynh,Vladik Kreinovich,Songsak Sriboonchitta,2015-12-28 This book is devoted to the analysis of causal inference which is one of the most difficult tasks in data analysis when two phenomena are observed to be related it is often difficult to decide whether one of them causally influences the other one or whether these two phenomena have a common cause This analysis is the main focus of this volume To get a good understanding of the causal inference it is important to have models of economic phenomena which are as accurate as possible Because of this need this volume also contains papers that use non traditional economic models such as fuzzy models and models obtained by using neural networks and data mining techniques It also contains papers that apply different econometric models to analyze real life economic dependencies

Remotely Sensed Albedo Jean-Louis Roujean,Shunlin Liang,Tao He,2021-02-24 Albedo is a known and documented phenomenon defined as the reflectivity of a surface i e the ratio of reflected light energy to incident light energy It is a dimensionless quantity used in particular in agro forestry urban environment cryosphere and geology It is an Essential Climate Variable ECV deemed extremely meaningful to compute the earth heat balance The albedo of natural surfaces varies largely especially in the visible with the lowest values found for water bodies and dense vegetation canopies and the highest values for desert and snow It also changes with the angular distribution and spectral composition of the incident radiation and with the surface moisture Satellite observations allow consistent measuring of the surface albedo at continental scale over a short period of time Long term series of surface albedo are good indicators of climate change especially over glaciers and polar caps On the other hand the albedo of bare soil provides a good diagnostic of their degradation The reliability of satellite albedo is verified against ground based radiometers and UAV which also serves to calibrate the instruments embarked on space borne observing systems and check the quality of the atmospheric correction
