**The Particle Connection** Christine Sutton,1985      **JavaTech, an Introduction to Scientific and Technical Computing with Java** Clark S. Lindsey,Johnny S. Tolliver,Thomas Lindblad,2005-10-13 JavaTech is a practical introduction to the Java programming language with an emphasis on the features that benefit technical computing After presenting the basics of object oriented programming in Java it examines introductory topics such as graphical interfaces and thread processes It goes on to review network programming and develops Web client server examples for tasks such as monitoring remote devices The focus then shifts to distributed computing with RMI Finally it examines how Java programs can access the local platform and interact with hardware Topics include combining native code with Java communication via serial lines and programming embedded processors An extensive web site supports the book with additional instructional materials JavaTech demonstrates the ease with which Java can be used to create powerful network applications and distributed computing applications It will be used as a textbook for programming courses and by researchers who need to learn Java for a particular task      *Dynamics Of Particles And The Electromagnetic Field (With Cd-rom)* Slobodan Danko Bosanac,2005-09-08 Advances in experimental techniques are allowing researchers to investigate the extremes of the dynamics of particle interactions with electromagnetic fields The theoretical tools at our disposal are classical and quantum mechanics and experience has shown that it is dangerous to dismiss one at the expense of the other Each has merits that should be fully explored the problem however is to bridge the gap between them so that the information they give is complementary rather than contradictory In this book that goal is achieved by formulating five postulates and the level of their implementation distinguishes the two mechanics That the dynamics of particles charges is not complete without unifying it with the dynamics of electromagnetic fields is given special emphasis In the first of three parts in the book Newton dynamics is formulated from the Liouville equation In the third part this forms the basis for implementing the uncertainty postulate to formulate quantum mechanics The theories of relativity and electromagnetic interactions are derived from one of the five postulates in the second part and the unification of the dynamics of particles and electromagnetic fields is formulated in the second and the third parts Numerous examples from each section illustrate the theory Employing functional analysis instead of the more abstract techniques of linear spaces linear operators group theory etc the book makes well suited to advanced undergraduate level courses in classical and quantum mechanics The material is also intended for postgraduate courses in atomic and molecular physics in particular with examples covering modern trends in research The book is accompanied by a CD ROM featuring various illustrative examples      **Computer Animation Complete** Rick Parent,David S. Modernity, Civilization and the Return to History Anthony F. Shaker,2020-10-06 The modern concept and study of civilization have their roots not in western Europe but in the spirit of scientific investigation associated with a self conscious Islamicate civilization What we call modernity cannot be fathomed without this historical connection We owe every major branch of science known today to the broad tradition of systematic inquiry that belongs to a region of being as Heidegger would say whose theoretical practical and institutional dimensions the philosophy of that civilization played an unprecedented role in creating This book focuses primarily on the philosophical underpinnings of questions relating to civilization personhood and identity Contemporary society and thinking in western Europe introduced new elements to these questions that have altered how collective and personal identities are conceived and experienced In the age of globalization expressions of identity individual social and cultural survive precariously outside their former boundaries just when humanity faces perhaps its greatest challenges environmental degradation policy inertia interstate

bellicosity and a growing culture of tribalism Yet the world has been globalized for at least a millennium a fact dimmed by the threadbare but still widespread belief that modernity is a product of something called the West One is thus justified in asking as many people do today if humanity has not lost its initiative This is more a philosophical than an empirical question There can be no initiative without the human agency that flows from identity and personhood i e the way we the acting subject live and deliberate about our affairs Given the heavy scrutiny under which the modern concept of identity has come Dr Shaker has dug deeper bringing to bear a wealth of original sources from both German thought and ikmah Islamicate philosophy the latter based on material previously unavailable to scholars Posing the age old question of identity anew in the light of these two traditions whose special historical roles are assured may help clear the confusion surrounding modernity and hopefully our place in human civilization Proximity to Scholasticism and therefore Islamicate philosophy lent German thought up to Heidegger a unique ability to dialogue with other thought traditions Two fecund elements common to Heidegger Q naw and Mull adr are of special importance Logos utterance speech as the structural embodiment at once of the primary meaning essential reality of a thing and of divine manifestation and the idea of unity in difference which adr finally formulated as the substantial movement of existence But behind this complexity is the abiding question of who Man is which cannot be answered by theory alone Heidegger who occupies a good portion of this study questioned the modern ontology at a time of social collapse and deep spiritual crisis not unlike ours Yet that period also saw the greatest breakthroughs in modern physics and social science The concluding chapters take up more specifically identity renewal in Western literature and Muslim reformism The renewal theme reflects a point of convergence between the Eurocentric worldview in which modernism has its secular aesthetics roots and a current originating in Ibn Taymiyyah s reductionist epistemology and skeptical fundamentalism It expresses a hopeless longing for origin in a historically pristine golden age an obvious deformation of philosophy s millennial concern with the commanding creative oneness of the Being of beings

*His Good Name* Christina Geisen, Jean Li, Steven B. Shubert, Kei Yamamoto, 2021-03-20 The wish to affiliate with a specific cultural social or ethnical group is as important today as it was in past societies such as that of the ancient Egyptians The same significance applies to the self presentation of an individual within such a group Although it is inevitable that we perceive ancient cultures through the lens of our time place and value systems we can certainly try to look beyond these limitations Questions of how the ancient Egyptians saw themselves and how individuals tried to establish and thus present themselves in society are central pieces of the puzzle of

how we interpret this ancient culture This volume focuses on the topic of identity and self presentation tackling the subject from many different angles the ways in which social and personal identities are constructed and maintained the manipulations of culture by individuals to reflect real or aspirational identities and the methods modern scholars use to attempt to say something about ancient persons Building on the work of Ronald J Leprohon to whom this volume is dedicated contributions in this volume present an overview of our current state of understanding of patterns of identity and self presentation in ancient Egypt The contributions approach various aspects of identity and self presentation through studies of gender literature material culture mythology names and officialdom

*CONTENDING FOR THE FAITH* Christopher H.K. Persaud, 2013-05-21 Doubt and disbelief in God's existence and his plan of redemption for lost humankind is becoming increasingly evident in today's hedonistic self directed world Many Christian believers even choose to listen to and to acknowledge a feel good now Gospel notwithstanding its deviation from Biblical truth and its possible damning implications Conversely many people are wont to deny the existence of a devil and the reality of a place of unceasing torment and or destruction called hell A good God cannot be so cruel they opine Jesus commissioned his followers to take his Gospel to the far reaches of the Earth and the Holy Scriptures encourage Christians in Jude 1-3 to earnestly contend for the faith More than at any other time in history believers must defend the Christian Gospel and advocate its timeless truths everywhere so that all of humankind may hear about Christ's offer of eternal life in a place named Paradise The miscellany of contemplative inquiries and arguments presented in *CONTENDING FOR THE FAITH* purposes to do just that endorse and advance the Gospel of Christ and help establish Biblical truth Much too much is at stake for not spreading or not listening to Christ's entreaty

**Particle or Wave** Charis Anastopoulos, 2020-12-08 Particle or Wave is the first popular level book to explain the origins and development of modern physical concepts about matter and the controversies surrounding them The dichotomy between particle and wave reflects a dispute whether the universe's most elementary building blocks are discrete or continuous in nature originating in antiquity when philosophers first speculated about the makeup of the physical world Charis Anastopoulos examines two of the earliest known theories about matter the atomic theory which attributed all physical phenomena to atoms and their motion in the void and the theory of the elements which described matter as consisting of the substances earth air fire and water He then leads readers up through the ages to the very frontiers of modern physics to reveal how these seemingly contradictory ideas still lie at the heart of today's continuing debates Anastopoulos explores the revolutionary contributions of thinkers like Nicolas Copernicus Isaac Newton and Albert Einstein He shows how Einstein's ideas about relativity unify opposing concepts by identifying matter with energy and how quantum mechanics goes even further by postulating the coexistence of the particle and the wave descriptions Anastopoulos surveys the latest advances in physics on the fundamental structure of matter including the theories of quantum fields and elementary particles and new cutting edge ideas about the unification of all forces This book reveals how the apparent

contradictions of particle and wave reflect very different ways of understanding the physical world and how they are pushing modern science to the threshold of new discoveries
