Prelude to Programming is appropriate for first programming and introductory programming courses in community colleges, 4-year colleges, and universities. No prior experience in programming or experience in introductory although students are expected to be familiar with college entry-level mathematics. *Prelude to Programming* provides beginning students with a language-independent framework for learning some programming concepts and effective design techniques. This approach gives students the foundation they need to understand their high school program design and to establish effective programming skills. The book illustrates various students a fairly and accessible presentation so they learn some programming concepts, like including data types, control structures, data files and arrays, and program design techniques such as top-down modular design and program design recommendations and style. Problem-solving skills are developed where students learn how to use basic programming tools and algorithms, which include data collection, alternative programming, calculating rates and averages, and searching and sorting lists. Searching and sorting algorithms are presented in both recursive and iterative implementations for you and your students. It provides A Language-Independent, Module Presentation. This book has been designed for that new student who is at the beginning of various levels. Features that help develop concepts, examples, exercises, and programming challenges help students understand how concepts are applied in the real world to real-time problems. The programming examples with RAMP (Read, Analyze, Plan, and Write) programming approach through the practical use of many real, or like, Microsoft-based programming environments. Support Learning. Resources are available for repeated use (the repeat presented in the text).
