

Chapter 13**Genetic Engineering****Section 13–1 Changing the Living World** (pages 319–321)

This section explains how people use selective breeding and mutations to develop organisms with desirable characteristics.

Selective Breeding (pages 319–320)

- What is meant by selective breeding? Only animals and plants with desired characteristics are allowed to produce the next generation.
- Circle the letter of each organism that has been produced by selective breeding.
☒ a. horses ☒ b. dogs ☒ c. cats ☒ d. potatoes
- Who was Luther Burbank? He was a selective plant breeder who developed disease-resistant potatoes to help fight potato blight in Ireland, as well as over 800 varieties of other plants.
- Complete the compare-and-contrast table of types of selective breeding.

SELECTIVE BREEDING

Type	Description	Examples
Hybridization	Crossing dissimilar individuals to bring together the best of both organisms	Disease-resistant Burbank potato
Inbreeding	The continued breeding of individuals with similar characteristics	Maintaining dog breeds

- Is the following sentence true or false? Hybrids are often hardier than either of the parents. true
- What two plant traits did Luther Burbank try to combine in his crosses?
 - Disease resistance
 - Food-producing capacity
- Is the following sentence true or false? To maintain the desired characteristics of a line of organisms, breeders often use hybridization. false
- Most members of a breed are genetically similar.
- What are the risks of inbreeding? There is always a chance that a cross between two individuals will bring together two recessive alleles for a genetic defect.

Climate-Resilient Development

Astrid Carrapatoso, Edith Kürzinger, 2013-10-01 The concept of resilience currently infuses policy debates and public discourse and is promoted as a normative concept in climate policy making by governments non governmental organizations and think tanks This book critically discusses climate resilient development in the context of current deficiencies of multilateral climate management strategies and processes It analyses innovative climate policy options at national inter regional and local levels from a mainly Southern perspective thus contributing to the topical debate on alternative climate governance and resilient development models Case studies from Africa Asia and Latin America give a ground level view of how ideas from resilience could be used to inform and guide more radical development and particularly how these ideas might help to rethink the notion of progress in the light of environmental social economic and cultural changes at multiple scales from local to global It integrates theory and practice with the aim of providing practical solutions to improve complement or where necessary reasonably bypass the UNFCCC process through a bottom up approach which can effectively tap unused climate resilient development potentials at the local national and regional levels This innovative book gives students and researchers in environmental and development studies as well as policy makers and practitioners a valuable analysis of climate change mitigation and adaptation options in the absence of effective multilateral provisions

Agroecology Stephen R. Gliessman, 2007 Providing the theoretical and conceptual framework for this continually evolving field Agroecology The Ecology of Sustainable Food Systems Second Edition explores environmental factors and complexities affecting agricultural crops and animals Completely revised updated and reworked the second edition contains new data new readings new issues and case studies and new options It includes two completely new chapters one on the role of livestock animals in agroecosystems and one on the cultural and community aspects of sustainable food systems The author clearly delineates the importance of using an ecosystem framework for determining if a particular agricultural practice input or management decision contributes or detracts from sustainability He explains how the framework provides the ecological basis for the functioning of the chosen management strategy over the long term He also examines system level interactions stressing the need for understanding the emergent qualities of populations communities and ecosystems and their roles in sustainable agriculture Using examples of farming systems in a broad array of ecological conditions the book demonstrates how to use an ecosystem approach to design and manage agroecosystems for sustainability Current
