into space on missions to collect data about the Earth Today the ability to forecast weather climate and natural hazards  
depends critically on these satellite based observations At the request of the National Aeronautics and Space Administration  
the National Research Council convened a committee to examine the scientific accomplishments that have resulted from  
space based observations This book describes how the ability to view the entire globe at once uniquely available from

satellite observations has revolutionized Earth studies and ushered in a new era of multidisciplinary Earth sciences In particular the ability to gather satellite images frequently enough to create movies of the changing planet is improving the understanding of Earth's dynamic processes and helping society to manage limited resources and environmental challenges The book concludes that continued Earth observations from space will be required to address scientific and societal challenges of the future
