Endocrine Pharmacology P. J. Bentley, 1980 A 1981 treatment of the action and uses of the hormones and drugs that influence endocrine functions in the body as seen by a pharmacologist The book includes a description of available drug preparations and expected therapeutic responses and an examination of their side effects and interactions with other drugs Special emphasis is placed on how such drugs and hormones work and on how their biological effects are related to their chemical structures The physiological background to the practical significance of such substances is given for both a healthy and a diseased state The book assumes little prior knowledge of endocrinology or pharmacology

Principles of Endocrine Pharmacology John A. Thomas, Edward J. Keenan, 1986 The authors have provided an overview of the relationships between hormones that are physiologic constituents of the body as well as their pharmacologic use in replacement therapies and related endocrine dysfunction Principles of

Endocrine Pharmacology concerns itself with the therapeutic use of hormones and hormone like substances or drugs that can act either by suppressing or enhancing the metabolism of certain glands of internal secretion Other drugs used for nonendocrine therapies can likewise affect the endocrine system Endocrine pharmacology emerged in the early 1900s with the use of crude pituitary extracts By the mid 1900s several investigators had isolated and begun to synthesize hormones or hormone like substances Recognizing the limited supply of hormones that could be obtained both from animal sources and human autopsy material the search for so called hormone substitutes also began early in the 1900s Recently recombinant DNA technologies have been used to provide alternative therapeutic sources of human insulin and human growth hormone Aside from insulin perhaps no other use of hormonally active substance is better exemplified by those drugs which affect fertility The synthesis of an orally effective steroid represented one of the first major breakthroughs in the chemical suppression of ovulation Since the orally active 19 norsteroids were introduced in the 1950s several oral contraceptive steroid preparations have been marketed Indeed the advent of oral contraceptives for birth control has led to a renewed interest in endocrine pharmacology
