HIV and Tuberculosis Irini Sereti, Gregory P. Bisson, Graeme Meintjes, 2019-11-30. Globally HIV associated tuberculosis is one of the most important causes of infection related death, accounting for one in every three HIV deaths and over 300 000 in 2017 alone. The HIV epidemic has undermined tuberculosis control efforts in many countries around the world as the virus has important modifying effects on the pathogenesis, diagnosis and treatment of TB. The management of HIV associated TB is also complicated by rapid clinical progression, immune reconstitution inflammatory syndrome, drug drug interactions and shared toxicities. The past two decades have yielded thousands of research publications and review articles on HIV associated TB.

HIV and Tuberculosis A Formidable Alliance consolidates this massive amount of data into a single resource. With contributions from myriad disciplines including epidemiology, immunology, public health and clinical medicine, this book provides well rounded and thorough coverage that will appeal to researchers and clinicians alike.
