The Future of Thermal Comfort in an Energy- Constrained World Tim Law,2013-04-19 The dissertation

investigates the scientific and business factors that have resulted in air conditioning being a major contributor to climate change. With his architectural background, the author demonstrates how a design methodology not commonly adopted in scientific studies may actually be a suitable way of dealing with a complex problem in the business as usual scenario involving building science, sociological values, and consumer behavior. Using his innovations as case studies, the author shows how good ideas cannot be evaluated on scientific merit alone and demonstrates why commercialization may have a pivotal role in deployment of research-based technology. He advances the theory of personalized thermal comfort, which can potentially resolve the air conditioning conundrum. **Modern Refrigeration Practice** Guy R. 1993 ASHRAE Handbook American Society of Heating, Refrigerating and Air-Conditioning Engineers, 1993 **Heat and Mass Transfer** Kurt C. Rolle, 2000 For a junior/senior level course in Mechanical Engineering Technology, Mechanical Engineering, Heat and Mass Transfer, or Thermal System Design. Helping engineering technology and engineering students learn to design and analyze systems they may encounter in real-world practice, this comprehensive text provides a solid and rational introduction to the scientific, mathematical, and empirical methods for treating heat and mass transfer phenomena and supplies the tools necessary for assessing and solving a variety of contemporary engineering problems. Graphic and straightforward in approach, it combines theory, real-world applications, experimental methods, and mathematical rigor to help students see the validity and relevance of concepts, highlights the convenience of various numerical methods to analyze more complicated situations involving heat and/or mass transfer, and helps students understand the relationship of heat and mass transfer to the disciplines of thermodynamics and fluid mechanics. **Heat Pumps** Institution of Chemical Engineers (Great Britain).
