*Instructions: Complete each section of this report and answer all questions in complete sentences for full credit.*

---

## Procedure

1. Place 200 candies in the shoebox, lettered sides up. The candies represent atoms of a carbon-14.
2. Cover the box and shake it for three seconds. This represents one interval of time.
3. Remove the lid and take out the candies (atoms) that are upside down (not showing letters). These pieces are the carbon-14 atoms that decayed during the time interval.
4. Count and record in a data table the number of decayed atoms and the number of remaining, not decayed, atoms.
5. Repeat steps 2 to 4 until all atoms have decayed or you have reached 30 seconds on the data table.
6. Repeat the entire experiment for a second trial and record all data.
