provided the facilities that should be expected for symbolic computation in modern computing environments We concluded that since the basic design decisions for the then current symbolic systems such as ALTRAN CAMAL REDUCE and MACSYMA were based on 1960 s computing technology it would be wise to design a new system from scratch Thus we could take advantage of the software engineering technology which had become available in recent years as well as drawing from the lessons of experience Maple s basic features elementary data structures Input output arithmetic with numbers and elementary simplification are coded in a systems programming language for efficiency
