Raia Environment Design Guide:

Bioclimatic Housing Richard Hyde, 2012-04-27 In the search for sustainable architecture there is growing interest in the relationship between nature and design In this vital new book the term bioclimatic relating to the dynamic between climate and living organisms is applied by the authors in focusing on countries where housing requires cooling for a significant part of the year In this context Bioclimatic Housing covers creative vernacular architecture to present both the theory and practice of innovative low energy architecture The book interweaves the themes of social progress technological fixes and industry transformation within a discussion of global and country trends climate types solutions and technologies Prepared under the auspices of a 5 year International Energy Agency IEA project and with case studies from Iran Malaysia Australia Japan Sri Lanka and Italy this is a truly international and authoritative work providing an essential primer for building designers builders developers and advanced students in architecture and engineering

Positive Development Janis Birkeland, 2012-05-16 Janis Birkeland presents the innovative new paradigm of Positive Development in which the built environment provides greater life quality health amenity and safety for all without sacrificing resources or money With a different form of design development itself can become a sustainability solution A cornerstone of this new paradigm is the eco retrofitting of the vast urban fabric we already inhabit The author presents a revolutionary new tool called SmartMode to achieve this end This book challenges everyone working in or studying the areas of sustainable development planning architecture or the built environment to rethink their current ideas and practices

Design for Sustainability Janis Birkeland, 2012-05-04 With radical and innovative design solutions everyone could be living in buildings and settlements that are more like gardens than cargo containers and that purify air and water generate energy treat sewage and produce food at lower cost Birkeland introduces systems design thinking that cuts across academic and professional boundaries and the divide between social and physical sciences to move towards a transdisciplinary approach to environmental and social problem solving This sourcebook is useful for teaching as each topic within the field of environmental management and social change has pairs of short readings providing diverse perspectives to compare contrast and debate Design for Sustainability presents examples of integrated systems design based on ecological principles and concepts and drawn from the foremost designers in the fields of industrial design materials housing design urban planning and transport landscape and permaculture and energy and resource management

Architecture, City, Environment Koen Steemers, Simos Yannas, 2000 PLEA is a network of individuals sharing expertise in the arts sciences planning and design of the built environment It serves as an international interdisciplinary forum to promote discourse on environmental quality in architecture and planning This 17th PLEA international conference addresses sustainable design with respect to architecture city and environment at the turn of the millennium The central aim of the conference is to explore the interrelationships and integration of architecture city and environment The Proceedings will be of interest to all those involved in bioclimatic design and the application of

Building Ecology Peter Graham, 2009-02-12 Buildings consume 40% of our planet's materials and 30% of its energy Their construction uses up to three million tonnes of raw materials a year and generates 20% of the solid waste stream If we want to survive our urban future there is no option but to build in ways which improve the health of ecosystems Understanding the concept of ecological sustainability and translating it into practice as sustainable development is a key challenge for today's built environment professionals The skill and vision of those who shape our cities and homes is vital to achieving sustainable solutions to the many environmental economic and social problems we face on a local national and global scale Peter Graham offers here a holistic view of ecologically sustainable building by drawing on established areas of knowledge demonstrating their relevance to the environmentally conscious building professional and putting the process product and impact of building into context Case studies illustrate how sustainable principles have been applied successfully and discussion topics are offered to stimulate thought Building Ecology will help planners surveyors designers and builders to incorporate sustainability into their everyday practice by showing which styles of building are ecologically sustainable providing fundamental knowledge for making decisions using the principles of ecologically sustainable building explaining a complex subject in a clear balanced way Building Ecology sets out the current scientific view of how nature works and how buildings link with and affect nature It provides fundamental knowledge for building in harmony with nature and keeping Earth's life supporting ecosystems healthy

The Environmental Brief Richard Hyde, Steve Watson, York St John Business School Steve Watson, Wendy Cheshire, Mark Thomson, 2007-01-24 The built environment is responsible for an estimated forty five per cent of all greenhouse gas emissions As the greatest opportunities for reducing these emissions occur during the briefing and design processes the pathway to better design lies in preparing environmental briefs and using these to drive building design and produce buildings of high environmental performance This process driven book looks at the theoretical issues involved in an environmental brief and outlines methods by which architects can approach the writing of a brief that considers all aspects of the natural and the built environment and relates these concepts to a number of case studies from around the world

Sustainable Buildings in Practice George Baird, 2010-01-29 Current assessment methods of sustainable buildings do not adequately account for the users needs Given that over the life of a building total salary costs far outweigh both operating costs and combined capital and rental costs the occupants needs are not something which should be sensibly ignored This book presents an unbiased evaluation of thirty of the most cutting edge sustainable buildings in the world in terms of the users perceived comfort health and productivity The author has visited the buildings interviewed the design teams and examined the findings of a sixty question standardized user questionnaire The book provides thirty case studies covering mixed mode passive and environmentally sustainable commercial and institutional buildings detailed

insights into the principles underlying the design of sustainable buildings worldwide over several climatic zones and eleven countries together with clear explanations and illustrations of innovative design practice a discussion of common issues and the lessons that may be learnt from a study of the performance of sustainable buildings in practice from the point of view of the people who use them This important book will be of great benefit to architects and engineers facility managers of commercial and institutional buildings as well as developers and researchers academics and students in these fields

Skyscraper Ken Yeang, 1999 Although many designers have succeeded in applying ecological or green design principles to architecture on the small scale city centers remain an uncharted frontier when it comes to achieving integrated ecologically responsive buildings Architect Ken Yeang takes us an important step forward by addressing the challenge of making the skyscraper an intensive large building type sustainable that is a structure that has a beneficial impact on the natural environment and increases energy efficiency in the core Yeang's premise is that the skyscraper is a built form that will stay with society well into the future and that its worldwide popularity is a reason in itself to rethink its relationship to the environment The Green Skyscraper presents a general framework for looking at ecological design a step by step guide to examining the fundamental premises of such an approach as well as its practical applications to the contemporary skyscraper Issues discussed include the use of energy and materials and their physical impact on the ecosystem illustrated with case studies from Yeang's own projects experiments and research Green Architecture Brian Edwards, 2001-09-05

Sustainability is a key issue As governments worldwide come under pressure to deliver a healthier environment they are starting to legislate for architects to produce greener design This title will provide a vital overview for those looking for an introduction to green architecture on an international level As well as including projects the title will provide an essential outline of the green movement and the influence of key practitioners and thinkers upon architectural practice worldwide
