

## CHAPTER 7 APPLICATION TECHNIQUES

Pesticide application today is the controlled placement of a pesticide to an area where the pest is likely to contact the chemical. As a rule, low pressure is the key to this controlled placement.

### Pest Control Application

How the pesticide is applied is the most important factor in effective and safe pest control. The most effective pesticide will not overcome improper use. Proper application can make the use of highly toxic chemicals low in risk to man, animals, and the environment.

There are certain basic steps that are followed in any pest control procedure.

**Make a thorough inspection** - Thorough inspections should precede the use of any pesticides. The use of a flashlight is an essential part of any inspection. Cockroaches and many other crawling pests spend most of their time in dark protected areas and in small cracks and crevices. The use of a flashlight can help locate these areas. Flushing agents, either dusts or aerosols, are often necessary to drive or flush insects out of their hiding places. Mirrors are sometimes helpful in inspecting hard to reach and out-of-the-way locations.

**Pest identification** - It is very important to identify the pest infestation before making an application of a pesticide.

**Select the proper pesticide** - As a general rule, the safest pesticide that will effectively control the pest is the pesticide to use. Other important considerations should include:

- labeling that allows for the intended use
- safety-related problems such as possible stains or persistent odors
- selection of the proper pesticide formulation
- selection of proper equipment

**Apply the pesticide properly** - The pesticide label will list:

- the sites that may be treated
- how to dilute the chemical
- application methods

There are several different types of application methods:

**General application** - Application of a pesticide at low pressure to large surface areas, such as floors, sub-flooring, walls or outside areas of a building. In many cases, you will need to determine the square footage of the treatment area in order to determine how much chemical to apply. To determine square footage multiply the length by the width.
