Peter Eisenman Diagram Diaries:

Peter Eisenman Peter Eisenman,1999 *Diagram Diaries* Peter Eisenman,R. E. Somol,1999 It has been said that Peter Eisenman considers architecture a form of shock therapy whatever his intent he has created one of the most controversial bodies of work of any contemporary American architect From Formalism to Weak Form: The Architecture and Philosophy of Peter Eisenman Stefano Corbo,2016-04-15 Peter Eisenman is one of the most controversial protagonists of the architectural scene who is known as much for his theoretical essays as he is for his architecture While much has been written about his built works and his philosophies most books focus on one or the other aspect By structuring this volume around the concept of form Stefano Corbo links together Eisenman s architecture with his theory From Formalism to Weak Form The Architecture and Philosophy of Peter Eisenman argues that form is the sphere of mediation between our body our inner world and the exterior world and as such it enables connections to be made between philosophy and architecture From the start of his career on Eisenman has been deeply interested in the problem of form in architecture and has constantly challenged the classical concept of it For him form is not simply a cognitive tool that determines a physical structure which discriminates all that is active from what is passive what is inside from what is outside He has always tried to connect his own work with the cultural manifestations of the time firstly under the influence of Colin Rowe and his formalist studies secondly by re interpreting Chomsky s linguistic theories in the 80 s by collaborating with Derrida and his de constructivist approach more recently by discovering Henri Bergson s idea of Time These different moments underline different phases different projects different programmatic manifestos and above all an evolving notion of form Taking a multi disciplinary approach based on the intersections between architecture and philosophy this book investigates all these definitions and in doing so provides new insights into and a deeper understanding of the complexity of Eisenman s work *The Urbanism Reader* Stefan Al,Tom Verebes,2025-02-06 Positioning design at the center of the debate The Urbanism Reader brings together classic and contemporary readings to help designers understand the complexities of cities and urban design in the 21st century The selection of readings presented here is uniquely tailored to a design perspective for architects and urban designers balancing social issues in urbanism with a clear focus on foregrounding design as an instrument for change in cities and examining the outcomes and challenges of recent design theories design methods and technologies in the built urban environment Covering today s most urgent issues 45 texts explore key topics in urbanism from digital design technologies to smart cities from the ongoing ecological crisis to public health and the impact of Covid 19 and from emergence and informality to economic inequity in global cities Chapters cover cultural issues including diversity indigenous knowledge decolonization social justice and inclusion alongside technological developments while a final chapter speculates on the future of urbanism through readings in AI virtual reality and the frontiers of current thinking in architecture and urban design The extracts are grouped by theme each with an introduction to the historical contexts and guiding paradigms

Plimmer, Peter Rodgers, 2012-06-19 This book constitutes the refereed proceedings of the 7th International Conference on Theory and Application of Diagrams Diagrams 2012 held in Canterbury UK in July 2012 The 16 long papers 6 short papers and 21 poster abstracts presented were carefully reviewed and selected from 83 submissions The papers are organized in keynotes tutorial workshops graduate student symposium and topical sections on psychological and cognitive issues diagram layout diagrams and data analysis Venn and Euler diagrams reasoning with diagrams investigating aesthetics applications of diagrams Bodies in Code Mark B. N. Hansen, 2012-10-02 Bodies in Code explores how our bodies experience and adapt to digital environments Cyberculture theorists have tended to overlook biological reality when talking about virtual reality and

Mark B N Hansen s book shows what they ve been missing Cyberspace is anchored in the body he argues and it s the body not high tech computer graphics that allows a person to feel like they are really moving through virtual reality Of course these virtual experiences are also profoundly affecting our very understanding of what it means to live as embodied beings Hansen draws upon recent work in visual culture cognitive science and new media studies as well as examples of computer graphics websites and new media art to show how our bodies are in some ways already becoming virtual Deleuze and

Architecture Helene Frichot, 2013-05-20 Critiques the legacy and ongoing influence of Deleuze on the discipline and practice of architecture This collection looks critically at how Deleuze challenges architecture as a discipline how architecture contributes to philosophy and how we can come to understand the complex politics of space of our increasingly networked world Since the 1980s Deleuze s philosophy has fuelled a generation of architectural thinking and can be seen in the design of a global range of contemporary built environments His work has also alerted architecture to crucial ecological political and social problems that the discipline needs to reconcile *Digital Signifiers in an Architecture of Information* Pablo

Lorenzo-Eiroa, 2023-05-31 This book proposes a new critical relationship between computation and architecture developing a history and theory of representation in architecture to understand and unleash potential means to open up creativity in the field Historically architecture has led to spatial representation Today computation has established new representational paradigms that can be compared to spatial representations such as the revolution of perspective in the Renaissance Architects now use software robotics and fabrication tools with very little understanding and participation in how these tools influence revolutionize and determine both architecture and its construction today Why does the discipline of architecture not have a higher degree of authorship in the conception and development of computational technologies that define spatial representation This book critically explores the relationship between history theory and cultural criticism Lorenzo Eiroa positions new understandings through parallel historical sections and theories of many revolutionary representational architecture canons displaced by conventional spatial projection He identifies the architects artists mathematicians and

philosophers that were able to revolutionize their disciplines through the development of new technologies new systems of representation and new lenses to understand reality This book frames the discussion by addressing new means to understand and expand architecture authorship in relation to the survey information representation higher dimensional space Big Data and Artificial Intelligence in the pursuit of activating an architecture of information This will be important reading for upper level students and researchers of architecture and architectural theory especially those with a keen interest in computational design and robotic fabrication

Unexpected Affinities Pablo Meninato, 2018-05-23 While the concept of type has been present in architectural discourse since its formal introduction at the end of the eighteenth century its role in the development of architectural projects has not been comprehensively analyzed This book proposes a reassessment of architectural type throughout history and its impact on the development of architectural theory and practice Beginning with Laugier s 1753 Essay on Architecture Unexpected Affinities The History of Type in the Architectural Project from Laugier to Duchamp traces type through nineteenth and twentieth century architectural movements and theories culminating in a discussion of the affinities between architectural type and Duchamp s concept of the readymade Includes over sixty black and white images

Unorthodox Ways to Think the City Teresa Stoppani, 2018-12-07 This book argues that architecture and the city and their processes can be better understood by drawing categories from disciplines that exceed the architectural and urban cultural context. It performs an open intellectual reading that traverses architecture and architectural theory but also art theory and history, cartography, philosophy, literature, and cultural studies to unfold a series of figures that are ambiguously placed between the representation and the construction of space in architecture and the city. The paradigm and philosophy of the island and the city, the map and representation, the model and making, and the questioning of form performed by dust are explored beyond their definition as processes that differently make space between architecture and the city and are proposed as unorthodox analytic techniques to decipher contemporary spatial complexity. The book analyses how these figures have been employed at different times and in different creative disciplines beyond architecture and in relation to changing notions of space and traces the role that they have played in the shift towards the dynamic that has taken place in contemporary theory and design research. What emerges is the idea of an architecture of the city that is not only physical but is largely defined by the way in which its physical spaces are regulated, lived, and perceived but also imagined and projected. *Crisis of the Object* Gevork Hartoonian, 2006-09-21 Looking back over the twentieth century, Hartoonian discusses the work of three major architects: Peter Eisenman, Frank Gehry, and Bernard Tschumi, in reference to their theoretical positions and historicizes present architecture in the context of the ongoing secularization of the myths surrounding the traditions of nineteenth-century architecture in general and in particular Gottfried Semper's discourse on the tectonic. Providing a valuable contribution to the current debates surrounding architectural history and theory, this passionately written book makes valuable reading for any architect. **Architectural Principles in the Age of Cybernetics** Christopher Hight, 2007-12-12 A theoretical history of anthropomorphism and proportion in modern architecture, this volume brings into focus the discourse around proportion with current problems of post-humanism in architecture alongside the new possibilities made available through digital technologies. The book examines how the body and its ordering has served as a central site of architectural discourse in recent decades, especially in attempts to reformulate architecture's relationship to humanism, modernism, and technology. Challenging some concepts and categories of architectural history and situating current debates within a broader cultural and technological context, Hight makes complex ideas easily accessible. Extensively illustrated and written without academic jargon for an informed but non-specialized architectural audience, this book elucidates the often obscure debates of avant-garde architectural discourse and design while demonstrating how these debates have affected everyday places and concepts of architecture. As a result, it will appeal to professional architects, academics, and students, combining as it does an insightful introduction to the fundamental issues of architectural history and theory over the past fifty years with entirely new formulations of what that history is and means. *306090 07: Landscape Within Architecture* Emily Abruzzo, Alexander Briseno, Jonathan D. Solomon, David L. Hays, Andrew Yang, 2004-09-30 This new

Disability, Space, Architecture: A Reader Jos Boys, 2017-02-17 Disability Space Architecture A Reader takes a groundbreaking approach to exploring the interconnections between disability architecture and cities The contributions come from architecture geography anthropology health studies English language and literature rhetoric and composition art history disability studies and disability arts and cover personal theoretical and innovative ideas and work Richer approaches to disability beyond regulation and design guidance remain fragmented and difficult to find for architectural and built environment students educators and professionals By bringing together in one place some seminal texts and projects as well as newly commissioned writings readers can engage with disability in unexpected and exciting ways that can vibrantly inform their understandings of architecture and urban design Most crucially Disability Space Architecture A Reader opens up not just disability but also ability dis ability as a means of refusing the normalisation of only particular kinds of bodies in the design of built space It reveals how our everyday social attitudes and practices about people objects and spaces can be better understood through the lens of disability and it suggests how thinking differently about dis ability can enable innovative and new kinds of critical and creative architectural and urban design education and practice

The Darkness of the Present Steve McCaffery, 2012-11-19 The Darkness of the Present includes essays that collectively investigate the roles of anomaly and anachronism as they work to unsettle commonplace notions of the contemporary in the field of poetics In the eleven essays of The Darkness of the Present poet and critic Steve McCaffery argues that by approaching the past and the present as unified entities the contemporary is made historical at the same time as the historical is made contemporary McCaffery s writings work against the urge to classify works by placing them in standard literary periods or disciplinary partitions Instead McCaffery offers a variety of insights into unusual and ingenious affiliations between poetic works that may have previously seemed distinctive He questions the usual associations of originality and precedence In the process he repositions many texts within genealogies separate from the ones to which they are traditionally assigned The chapters in The Darkness of the Present might seem to present an eclectic fa ade and can certainly be read independently They are linked however by a common preoccupation reflected in the title of the book the anomaly and the anachronism and the way their empirical emergence works to unsettle a steady notion of the contemporary or new

PERCEPTION in Architecture Miriam Mlecek, Claudia Perren, 2015-02-27 Definitions of space are as diverse as the disciplines in which it plays a fundamental role from science and philosophy to art and architecture each field's perception of space is often simplified or reduced This consequently denies access to new spaces whose definitions and perspectives strategies and impacts on human perception are rarely considered in any cohesive manner This is where the Aedes Network Campus Berlin ANCB programme No Space Without Traits came in particularly through artistic approaches it aimed to open doors into spatial worlds that until now have remained closed The symposium PERCEPTION in Architecture HERE and NOW was part of this programme and invited critical and comprehensive contributions by academics artists architects designers and curators These presentations are brought together in this volume to reflect upon new spatial concepts and thus access new spaces of perception in architecture The symposium stimulated a discourse focused on spaces as a collective entity notions of spatial truth the multiplicity of experience and Wahrnehmungsapparate as well as physical visual acoustic and virtual manifestations of space in relation to social cultural historical and political forces
