

Figure 11 Australian PowerDrive External Charger
Models 27640-22, and 27640-28

POWERDRIVE EXTERNAL CHARGER FEATURES

- **Charge Interlock**

PowerDrive battery charger DC plugs have three pins rather than two blades common on most standard charger plugs. Two of these pins are the positive and negative leads as on standard chargers; the third pin is a sensing lead that is the communication link between the charger and the onboard computer. When the charger plug is plugged into the vehicle receptacle, the onboard computer locks out the vehicle drive system. This prevents the possibility of driving the vehicle while the charger is plugged in and potentially damaging the vehicle and charger.

- **Long-Term Storage Charge**

IQ System, PowerDrive, and PowerDrive Plus vehicles with PowerDrive chargers are designed to be left connected with AC power to the charger, during off-season or long-term storage. The onboard computer will automatically activate the charger every 15 days. To return the vehicle to service, unplug the charger DC cord, wait 15 seconds for the computer to reset, and plug the charger back in. **See following WARNING.** This will ensure the batteries are at their optimum charge prior to returning the vehicle to service.

⚠ WARNING

- The charger plug must be pulled slowly from the receptacle. Jerking or pulling the DC cord out quickly could cause arcing and burning that could damage the plug and receptacle and could cause batteries to explode.

CAUTION

- Be sure to check the batteries and charger monthly to maintain correct battery water level and ensure the charger is operating correctly during storage.

POWERDRIVE ONBOARD CHARGER FEATURES

- **Charge Interlock**

When the AC power cord is inserted into a wall receptacle, the onboard computer locks out the vehicle drive system. This prevents the possibility of driving the vehicle while the charger is plugged in and potentially damaging the vehicle and charger.
